

# CENTRAL BANK OF THE REPUBLIC OF UZBEKISTAN

BALANCE OF PAYMENTS,  
INTERNATIONAL INVESTMENT  
POSITION AND EXTERNAL DEBT OF  
THE REPUBLIC OF UZBEKISTAN

For 2020

## INTRODUCTION

This publication is prepared by the Central Bank of the Republic of Uzbekistan. The publication provides information on the balance of payments and international investment position, as well as external debt for 2010-2020, which was compiled in accordance with the sixth edition of the Balance of Payments and International Investment Position Manual (BPM6. IMF, 2009) and External Debt Statistics Manual (IMF, 2013).

The recovery of historical data and implementing new forms of reporting on external debt was performed in line with transition to IMF's Special Data Dissemination Standard and support users with consecutive data series.

While performing a comparative analysis, some relative indicators, as well as expert opinions on the observed changes were presented to facilitate the understanding of the data in the context of overall economic conditions. Methodological comments on balance of payment, as well as sources of information and explanations to compiled data are given in a separate section at the end of the publication.

Previously published historical series are adjusted when accounting methodology is changed and/or additional data is received. Wherein reports received on transactions between residents and nonresidents, information provided by business entities, detected statistical discrepancies and foreign trade data refinement are the sources for an update of previously published series.

The data, presented in the publication, is relevant as of March, 2021.

Due to rounding of data provided in the tables of this review, minor discrepancies between the result and the sum of the summands are possible.

Statistical tables on the analytical presentation of the balance of payments and international investment position and the total external debt are provided on the website of the Central Bank of the Republic of Uzbekistan <http://www.cbu.uz/>. In addition, statistical tables on the standard and analytical presentations of the balance of payments and international investment position are available on IMF's <http://data.imf.org/>.

For questions and proposals concerning the publication, please, contact the Central Bank of the Republic of Uzbekistan by the following phone numbers or e-mail addresses:

## ANNOTATION

The main factors that influenced the formation of the balance of payments indicators of the Republic of Uzbekistan in 2020 were changes in the internal and external conditions associated with the ongoing coronacrisis, which led to a reduction in foreign trade, a slowdown in global business activity and an increase in financial risks.

In addition, taking into account the fact that in 2020 introduction of quarantine measures in countries sending money transfers to Uzbekistan was not nation wide and formalization of cash brought in by individuals transfers to residents remained at the level of corresponding period of 2019. Also, observed positive dynamics in world gold prices partially offset the decline in exports.

Under the influence of the above factors, the current account formed with a deficit of USD 3.1 billion (*USD 3.4 billion in 2019*). At the same time, the negative trade balance (goods and services) and primary income (*USD 8.2 billion*) was partially offset by the positive balance of secondary income (*USD 5.1 billion*).

Negative balance of the financial account amounted to USD 4 billion due to the growth of financial liabilities of residents (*USD 11.0 billion*), as well as the acquisition of financial assets by residents (*USD 7.0 billion*).

Growth of net external debt in the form of loans increased by 20%, up to USD 7.1 billion compared to previous year and it's stock amounted USD 30 billion<sup>1</sup> at the end of the year. The largest borrowings were made by government and banking sectors.

In addition, portfolio borrowings of government and banking sectors amounted to USD 1.4 billion, as a result of placing Eurobonds in international markets.

Net foreign direct investment amounted to USD 1.7 billion (*USD 2.3 billion in 2019*). Net investments, excluding operations of enterprises operating on the basis of product sharing agreements, amounted to USD 1.8 billion, in the form of debt instruments from parent companies USD 153.2 million. A net decrease in investment by enterprises operating on the basis of production sharing agreements is USD 276.1 million. Uncertainty associated with the duration of the coronavirus pandemic had a negative impact on the foreign investments.

Operations with reserve assets in foreign currencies amounted to USD 1.7 billion. Due to positive dynamics of the price of gold on the international market (increased by 25.1% from USD 1511.5 to 1891.1 troy/ounce), the volume of gold reserve of Uzbekistan increased and reached USD 34.9 billion as of January 1, 2021.

---

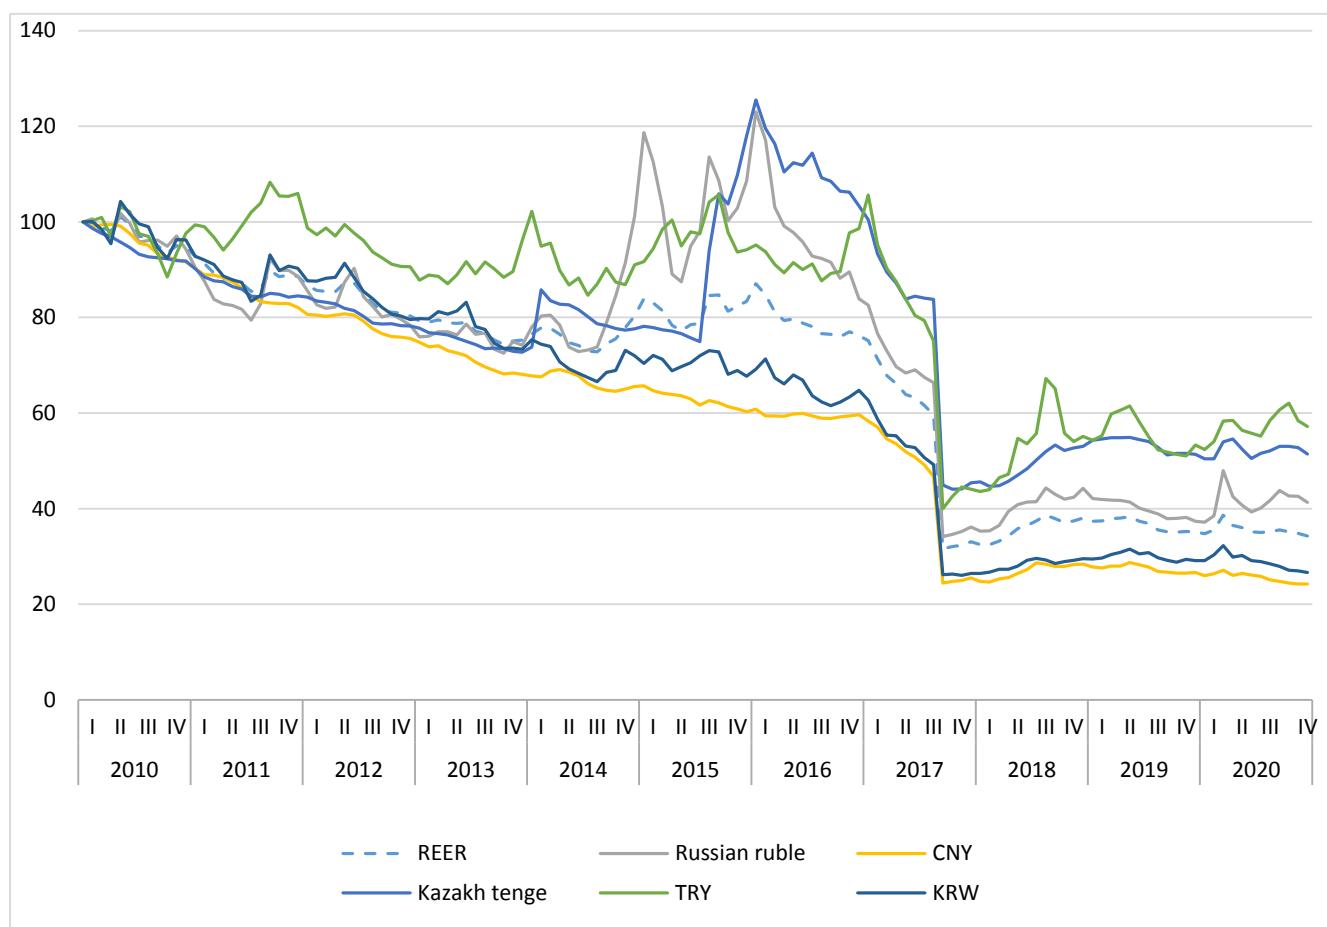

<sup>1</sup> Loans, borrowed from parent enterprises indicated in sector foreign direct investment; Eurobonds, issued by commercial banks and general government indicated in sector portfolio investment

The real weakening of the index of bilateral real exchange rates of the sum against the currencies of countries – main trading partners relative to the base period, having cheapened goods produced in Uzbekistan relative to goods produced in trading partner countries, was at the level supporting export (Figure 1).

Figure 1

### REAL EXCHANGE RATES OF SUM TO MAIN CURRENCIES<sup>2</sup>

(January 2010=100)

The net international investment position of the Republic of Uzbekistan as of the end, 2020 equaled USD 20.4 billion. An analysis of the international investment position by sectors of the economy showed that in 2020, the general government and other sectors retain the position of «net creditor», while the banking sector is a «net borrower».

As of January 1, 2021, the total external debt of the Republic of Uzbekistan accounted for USD 33.8 billion, of which USD 21.3 billion - government and government guaranteed external debt, and USD 12.5 billion – non guaranteed external debt.

<sup>2</sup> The real exchange rates of the sum to the currencies of the main trading partners are calculated taking into account changes in the price level in the countries of the main trading partners and represent the change in the index relative to the base period. An increase in the index means a strengthening of the sum to the currencies of the main trading partners. Moreover, the index growth rate is sensitive to the choice of the base period.

## I. BALANCE OF PAYMENTS OF THE REPUBLIC OF UZBEKISTAN

### CURRENT ACCOUNT

For 2020, the current account had a deficit which amounted to USD 3.1 billion (USD 3.4 billion for 2019). Reduction in the negative current account balance is explained by decline due to pandemic and a gradual recovery of exports and imports, decrease in primary income with preservation of the volume of cross-border remittances at the level of the corresponding period of previous year ([Figure 2](#)).

Figure 2

#### BALANCES OF CURRENT ACCOUNT COMPONENTS

In 2020, there was a reduction in all components of current account compared to the same indicators of the corresponding period of the previous year. ([Table 2](#)).

## STRUCTURE OF CURRENT INCOME AND CURRENT EXPENSES

(mln. doll.)

Indicators	2018	2019	2019				2020	2020				Changes (relative to 2019)
			Q1	Q2	Q3	Q4		Q1	Q2	Q3	Q4

<i>Secondary income receivable</i>	615,2	585,7	144,7	148,9	143,3	148,8	445,3	130,5	87,9	121,0	105,9	-24,0%
<b>Current account balance</b>	<b>-3 593,2</b>	<b>-3 365,6</b>	<b>-1 046,2</b>	<b>-712,9</b>	<b>-14,5</b>	<b>-1 592,0</b>	<b>-3 138,4</b>	<b>-911,7</b>	<b>-1 050,9</b>	<b>1 595,2</b>	<b>-2 771,0</b>	<b>-6,8%</b>

\* including gas USD 460.6 million, precious metals (gold) USD 5.8 billion

Thus, according to the results of 2020, the negative trade balance taking into account international services and primary income according to the BPM6 methodology, amounted to USD 8.3 billion. At the same time, the positive balance of secondary income equaled USD 5.1 billion.

## GOODS

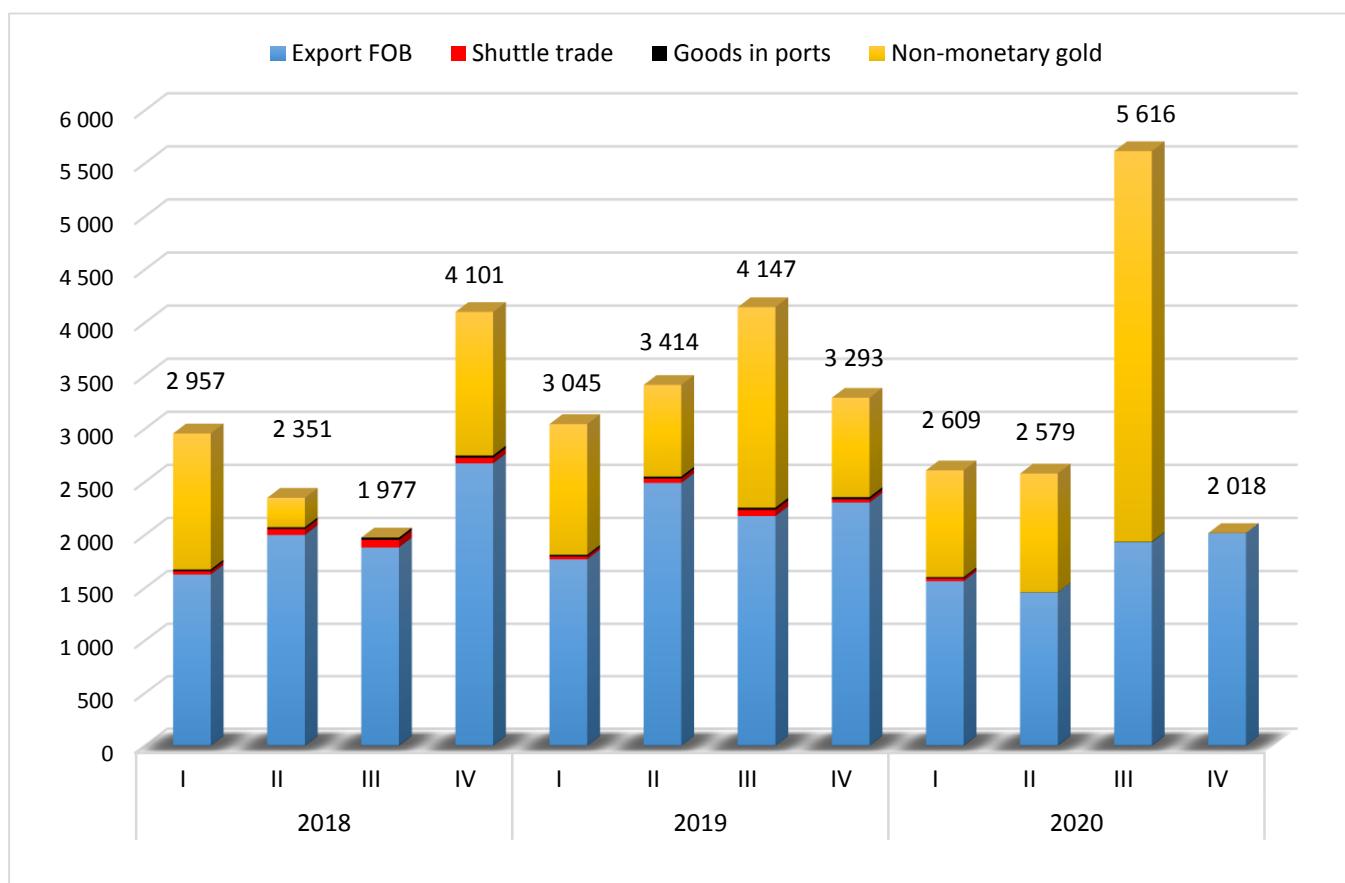

For 2020, foreign trade in goods (including trade of precious metals (*gold*) and adjustments<sup>3</sup>) amounted to USD 31.9 billion (*USD 35.1 billion for 2019*). Volume of exports and imports amounted to USD 12.8 billion and USD 19.0 billion, respectively. Thus, the negative trade balance of goods amounted to USD 6.2 billion.

The volume of export of goods (without export of non-monetary gold and adjustments) decreased by USD 1.1 billion or by 20% (in 2019, an increase of 560 mln. or 7% was observed). Furthermore, due to a sharp decline in world energy prices and drop in demand from main consumers, there was a decrease in the export volume of gas by 79% in comparison with the 2019. ([Figure 3](#)).

Figure 3

### COMPONENTS OF GOODS EXPORTS

(mln. USD)

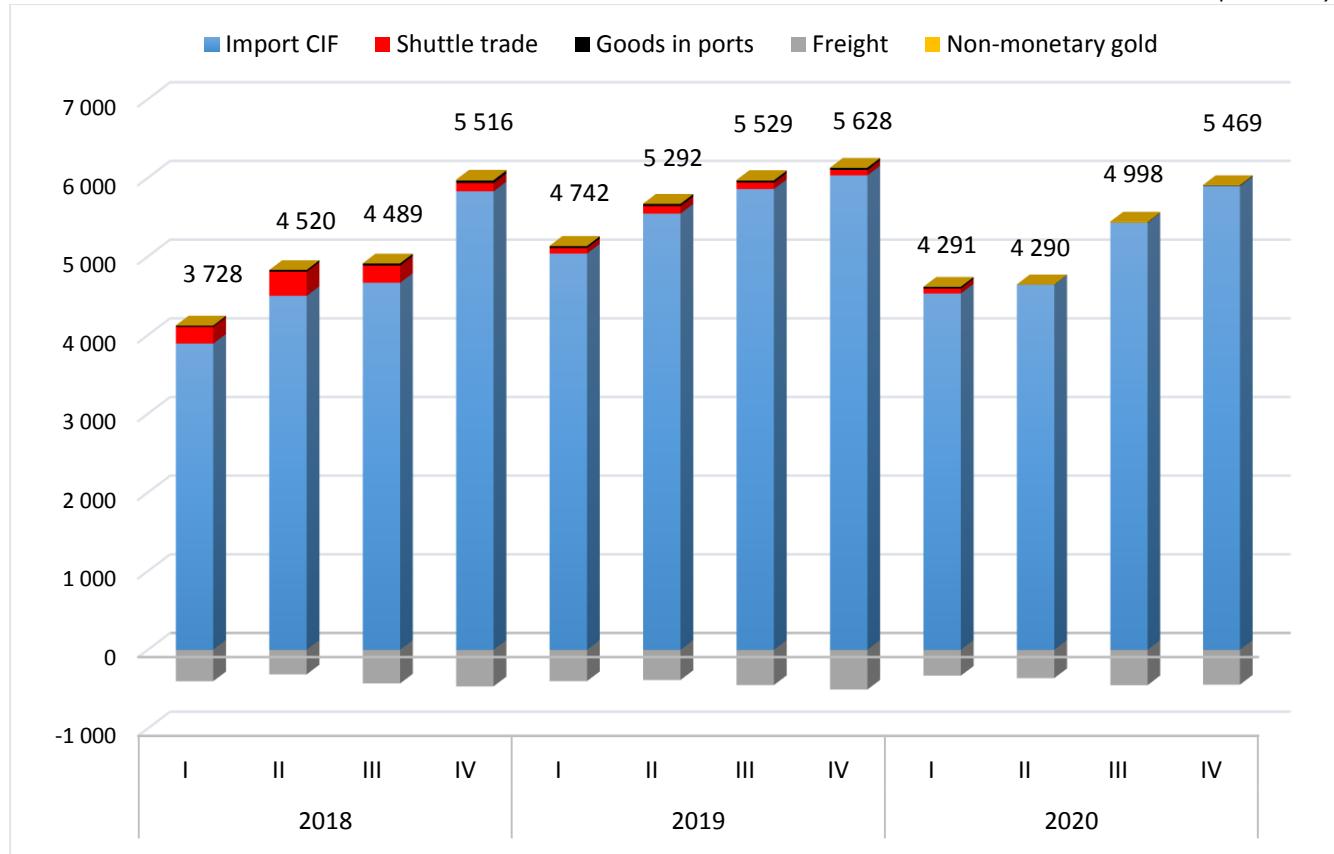

<sup>3</sup> Including account of shuttle trade which calculated on the basis of a survey at border posts, and products (jet fuel, etc.) purchased at airports by foreign airplanes

Volume of import of goods decreased by 10% compared to 2019 (in 2019, an increase by 16% was observed) (Figure 4).

Figure 4

### COMPONENTS OF GOODS IMPORTS

(mln. USD)

Moreover, for 2020, 77% of total exports of goods (*excluding non-monetary gold*) accounted for six countries such as China – 19, Russia - 17%, Turkey - 14%, Kazakhstan and Kyrgyzstan – 10% for each and Afghanistan - 6% (Figure 5).

At the same time, the group of goods «precious metals and stones» occupied a significant share in the structure of export of goods – USD 5.9 billion (*USD 5.1 billion for 2019*), «textiles and textile products» – USD 2.1 billion (*USD 2.0 billion for 2019*), «vegetable products» – USD 1.2 billion (*USD 1.4 billion for 2019*) and «nonprecious metals and products of them» – USD 1.1 billion (*USD 1.1 billion for 2019*). These groups recorded 91% of the total exports of goods (*91% for 2019*) (Figure 6).

The predominance of commodities in the volume of exports (gold and natural gas) amounted for 49% of the total volume of exports, 45% of which accounted for gold and 4% for natural gas. Moreover, 94% of the total volume of natural gas exports accounted for China, 5% for Tajikistan and 1% to Kyrgyzstan.

Figure 5

## MAIN EXPORT DESTINATIONS

*(without the export of non-monetary gold)*

(mln.USD)

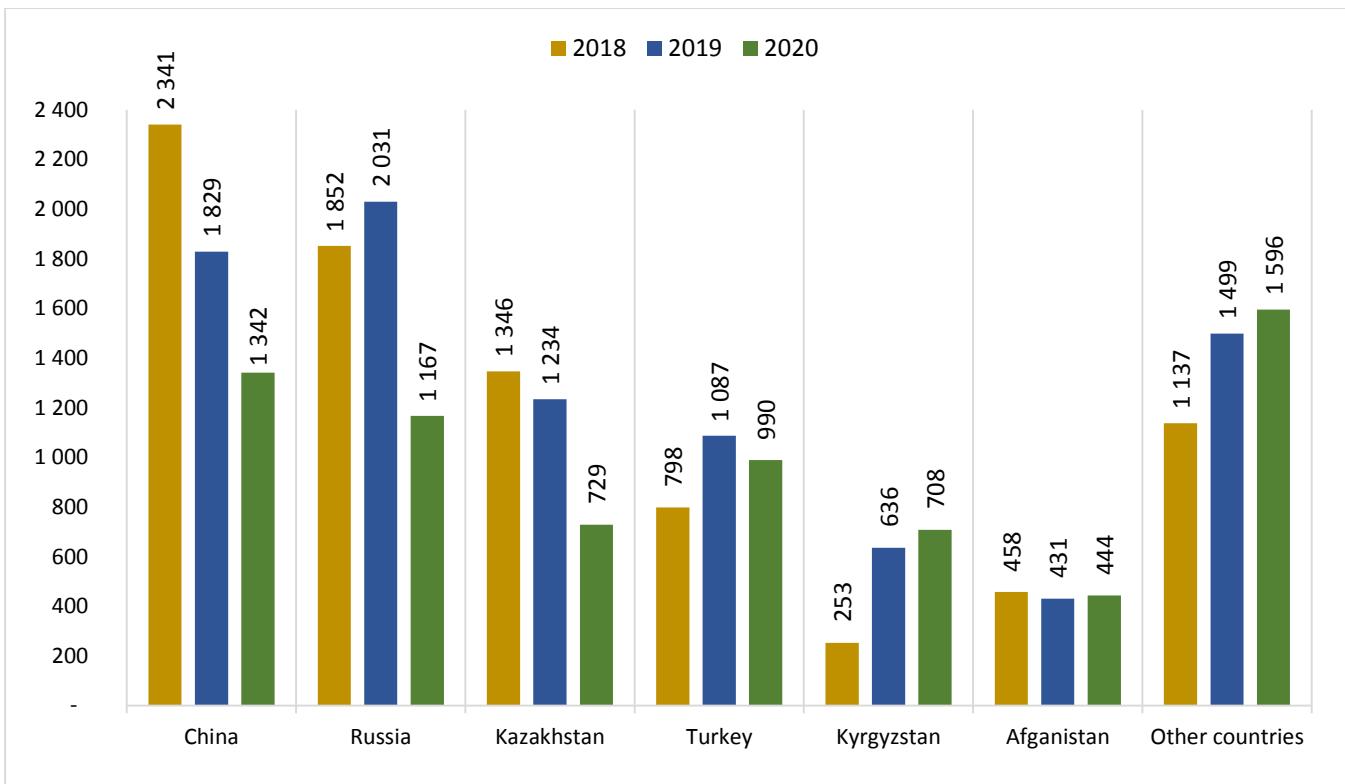

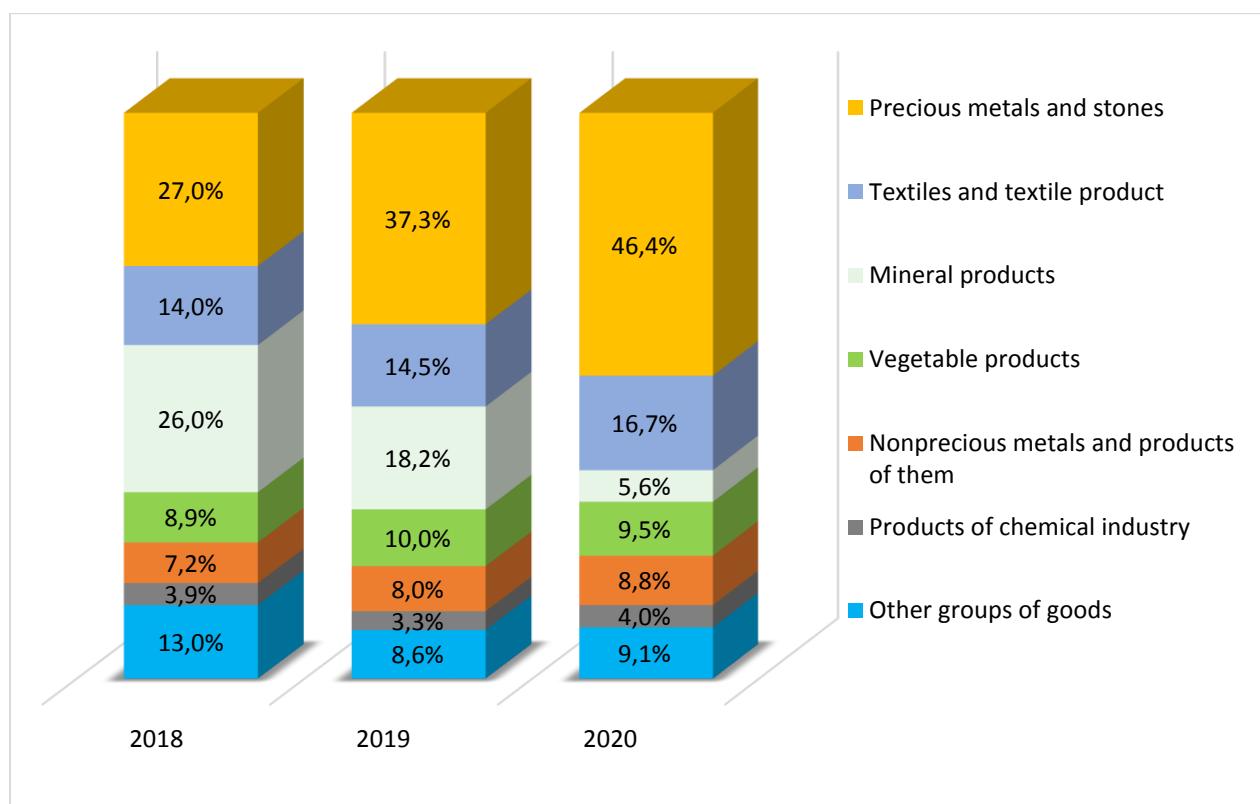

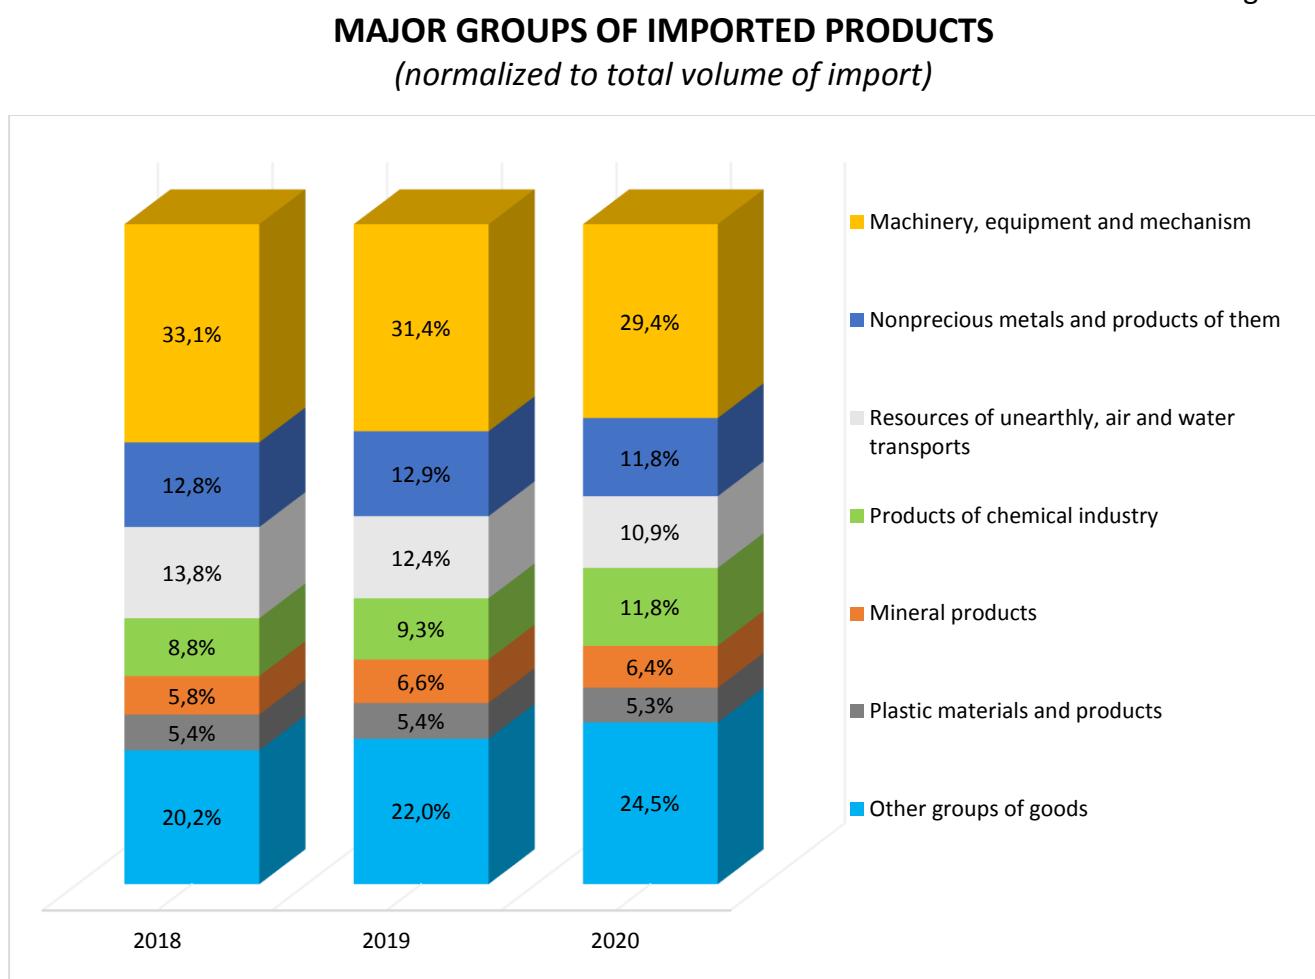

Figure 6

## MAJOR GROUPS OF EXPORTED PRODUCTS

*(normalized to total volume of export)*

Besides, the group of goods «machinery, equipment, mechanisms» occupied a significant share in the structure of import of goods – USD 6.0 billion (*USD 7.1 billion for 2019*), «nonprecious metals and products of them» – USD 2.4 billion (*USD 2.9 billion for 2019*), «products of the chemical industry» – USD 2.4 billion (*USD 2.1 billion for 2019*), «air and water transports» – USD 2.2 billion (*USD 2.8 billion for 2019*). These groups of goods recorded 70% of the total volume of imports of goods (*73% for 2019*) ([Figure 7](#)).

Figure 7

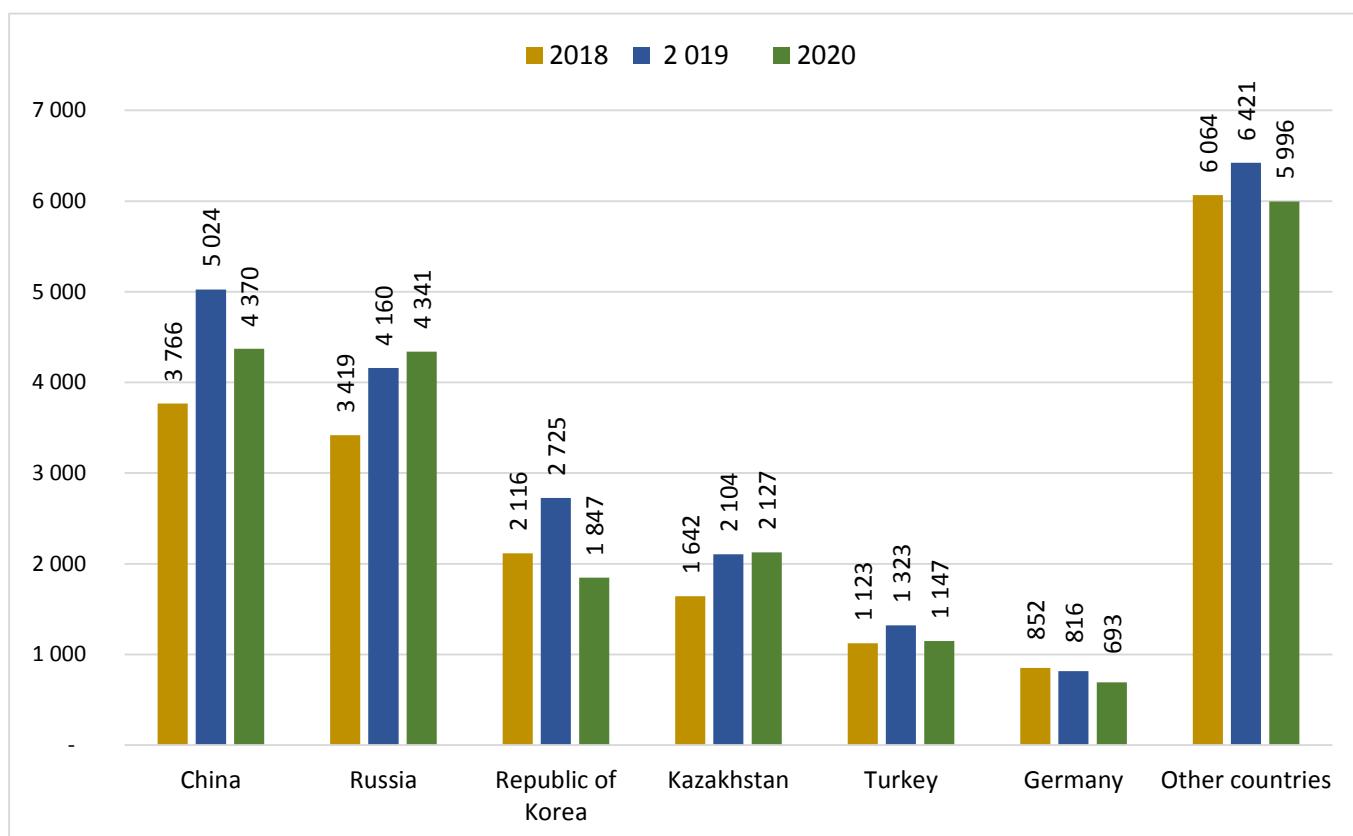

Import of goods from all major trading partners decreased compare to 2019, with the exception of Russia and Kazakhstan (*an increase of 4% and 1% respectively*). The reason for this reduction was the slowdown in economic activity during the reporting period.

Herewith, the volume of imported goods from China reduced by 13%, from the Republic of Korea – 32%, from Turkey – 13% ([Figure 8](#)). The total share of these countries in imports for 2020 amounted to 67%, 21% of which accounted for Russia, 21% for China, 9% for the Republic of Korea, 10% for Kazakhstan, 6% for Turkey. (*For 2019, the total shares of these countries in the volume of imports was 68%, of which 18%, 22%, 12%, 9%, 6%*. At the same time, the share of European countries increased from 23% to 24%, which was related to an decrease in the shares of main trading partners in the volume of imports.

Figure 8

## MAIN IMPORT DESTINATIONS

(mln.USD)

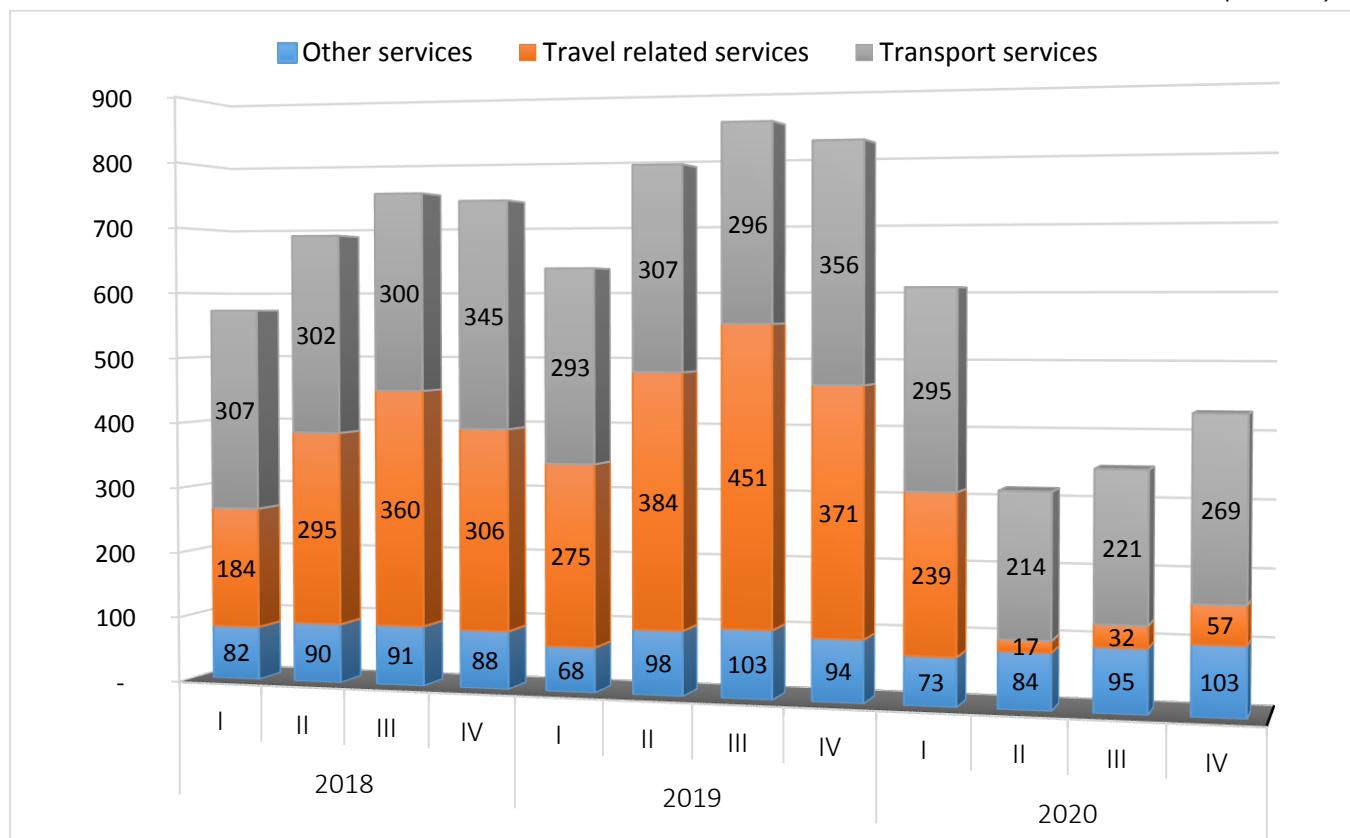

## SERVICES

The deficit in international trade with services recorded a decrease by 20% compared to 2019 and amounted USD 1.8 billion, mainly due to a decrease in the total volume of foreign trade turnover in international services. Transport and travel-related services remain historically dominant in the structure of exports and imports of services. ([Figures 9, 10](#)).

Figure 9

### MAIN TYPES OF EXPORTED SERVICES

(mln.USD)

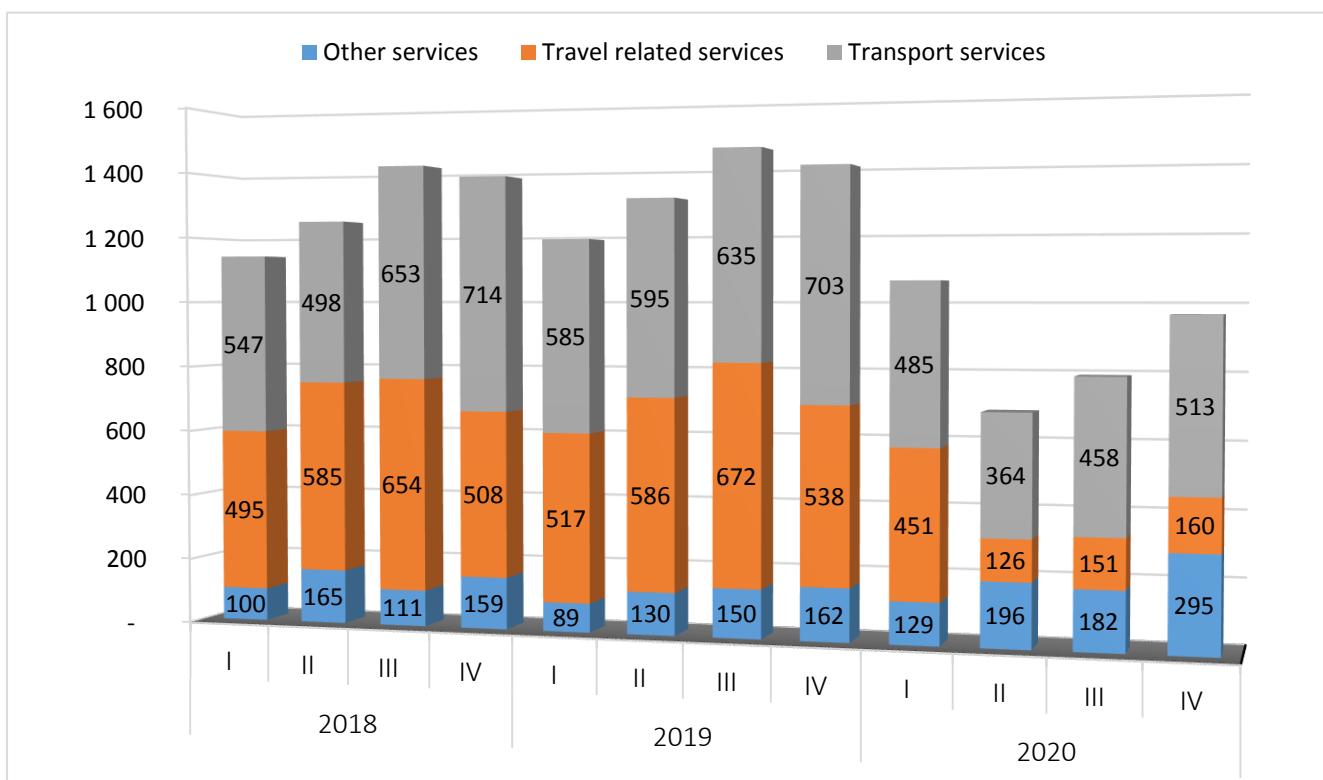

During the reporting period, volume of exported services amounted to USD 1.7 billion (*USD 3.1 billion for 2019*), while their imports amounted to USD 3.5 billion (*USD 5.4 billion for 2019*). Transport services and services related to tourism (travel) accounted for about 78% of the total export and import of services.

At the same time, as a result of the worsening global epidemiological situation and the suspension of passenger air and rail services, the international services related to tourism (travel) decreased both in exports (by 77%) and in imports (by 62%). Thus, the travel services sector remains the most vulnerable and continues to suffer significant losses during the coronavirus pandemic.

Figure 10

## MAIN TYPES OF IMPORTED SERVICES

(mln.USD)

The imports of transportation services were dominated by services provided by rail and road transport. The volume of imports of transport services by rail amounted to USD 1.2 billion (*USD 1.3 billion for 2019*), by road transport – USD 257.2 million (*USD 478.5 million for 2019*), by air transport – USD 231.5 million (*USD 480.3 million for 2019*), while volume of other types of transport services accounted for USD 122.4 million (*USD 302.6 million for 2019*).

## PRIMARY INCOME

Deficit balance of primary income for 2020 was equal to USD 241.0 million (*positively USD 737.2 million for 2019*) (Figure 11). The reduction in the balance of primary incomes is associated with a decrease in the amount of short-term workers and an increase in the income of non-residents on external loans and investments.

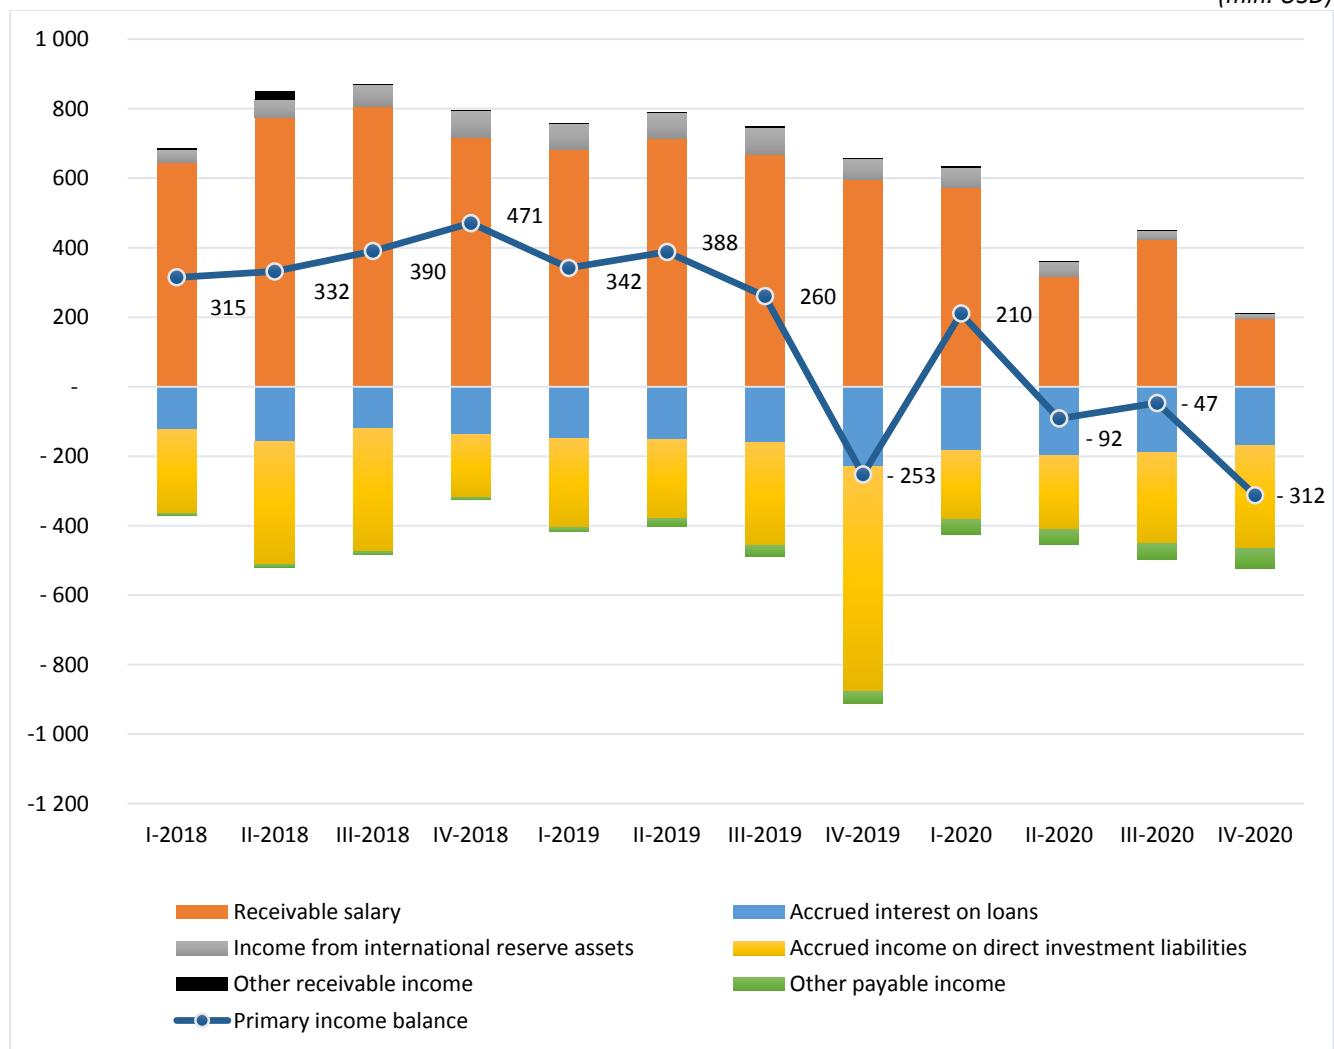

For 2020, the main source of the «Income» component was wages received by short-term workers of Uzbekistan abroad, which amounted to USD 1.5 billion (*USD 2.7 billion for 2019*).

Investment income of residents equaled USD 147.8 million (*USD 296.6 million for 2019*), USD 137.2 million of which (*USD 283.7 million for 2019*) was received from the placement of international reserves. The remaining part of income was mainly earned from correspondent accounts and deposits of residents in foreign banks.

Figure 11

### CHANGES IN PRIMARY INCOME COMPONENTS

(mln. USD)

Moreover, investment income of non-residents in Uzbekistan amounted to USD 1.8 billion (*USD 2.2 billion for 2019*). The growth was observed mainly due to income from loans and borrowings, including from sovereign bonds of Uzbekistan and Eurobonds of commercial banks (*USD 78.0 million for 2020, USD 45.0 million for 2019*). In addition, direct investment income amounted to USD 973.5 million (*USD 1.4 billion for 2019*).

Reinvested earnings of foreign investors in the considered period was equal to 55% of total amount of income from direct investment (50 % for 2019). The growth of this indicator may demonstrate increase in foreign investors' trust to Uzbek economy.

## SECONDARY INCOME

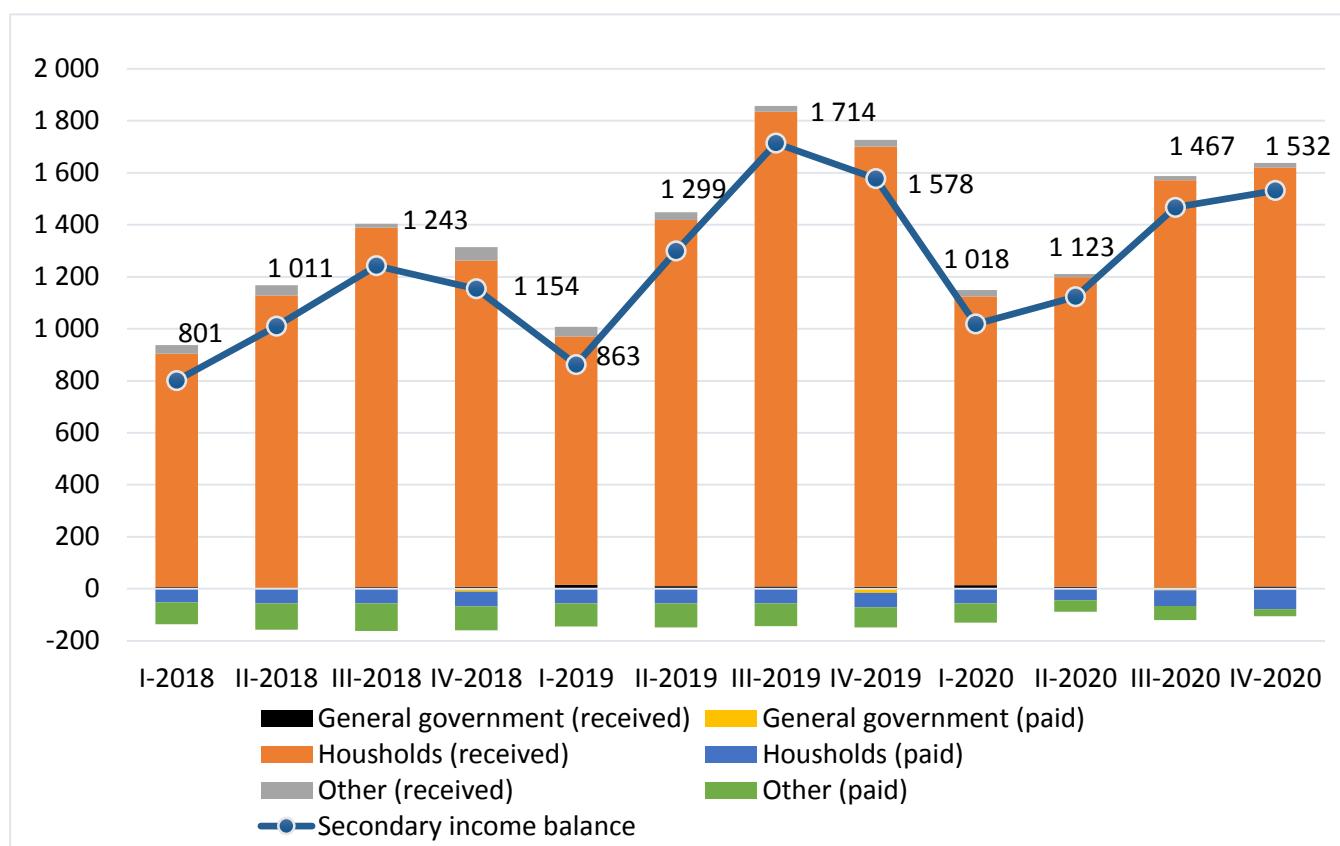

The positive balance of secondary income amounted to USD 5.1 billion (*USD 5.5 billion for 2019*). The positive balance remains stable mainly due to cross-border remittances of long-term workers.

These transfers make up the bulk of the components of the secondary income and are gratuitous transfers to individuals-residents (households) from abroad. Transfers to households are mainly carried out through international money transfer systems. ([Figure 12](#)).

Figure 12

### CURRENT TRANSFERS

(mln. USD)

Receipts of secondary income for 2020, as in previous periods, have seasonal character. The quarantine measures introduced starting from the second quarter influenced the seasonal trend, smoothing the downward trend in the last quarter of this year, including through the partial formalization of transfers of individuals. Also, part of the cross-border remittances received by citizens of Uzbekistan are sent by their relatives permanently residing or living abroad ([Figure 13](#)).

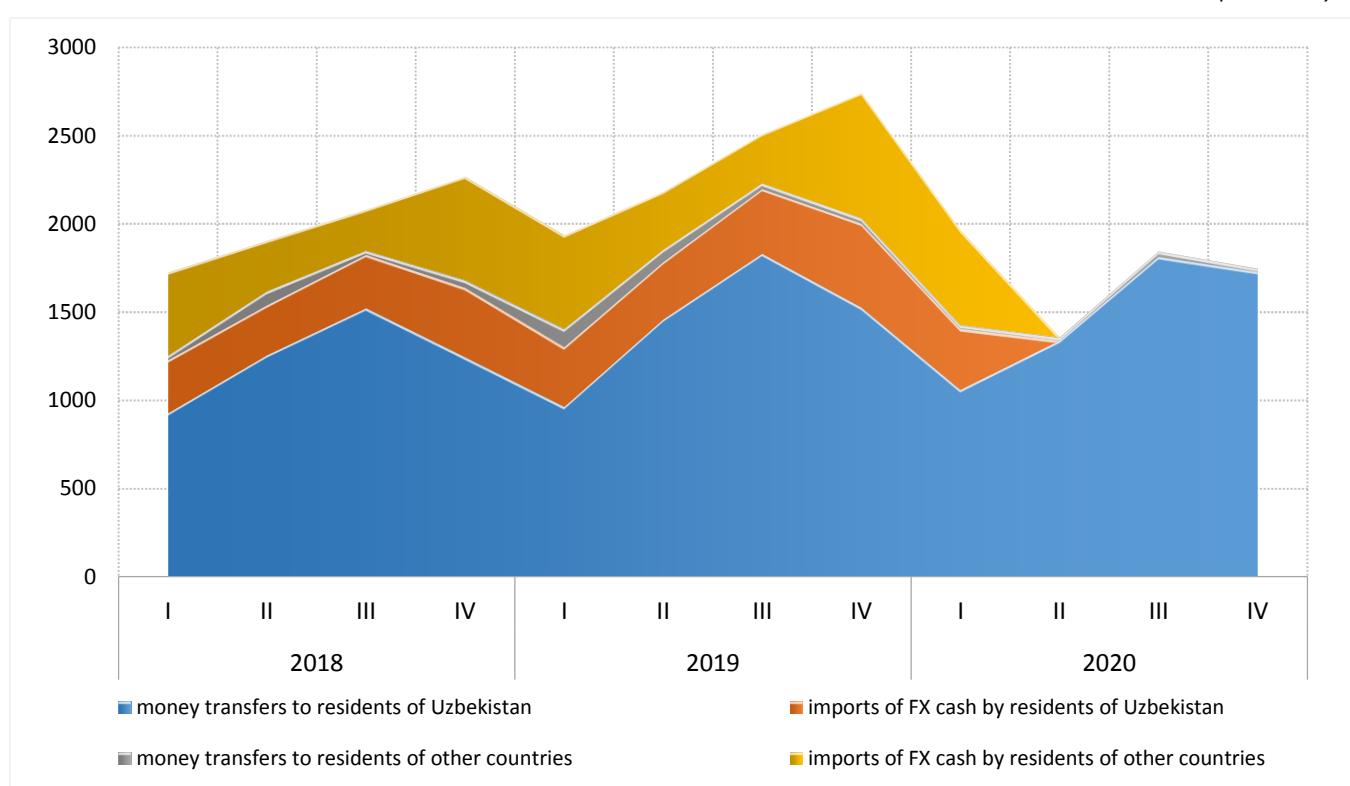

It should be noted that, in practice, remittances can be used not only by short-term workers to send assistance to their families and non-residents (*who include workers that have been abroad for more than 1 year*) to send personal transfers to residents, but also can be used for the purpose of making settlements on foreign trade operations. In this regard, the amount of remittances and cash imports of foreign currency by individuals-residents is reduced by the amount estimated on the basis of the survey of shuttle exports, amounting to USD 26 million for 2020.

At the same time, the restriction of movement of individuals across the border of Uzbekistan within the framework of introduced quarantine measures caused the reduction in currency cash flows. This could have served as the main reason for implementation of cash foreign currency imports through the cross-border money transfers and played its role in preservation of transfers at the level of 2019.

**MAIN SOURCES OF RECEIPTS OF INDIVIDUALS**

Figure 13

(mln. USD)

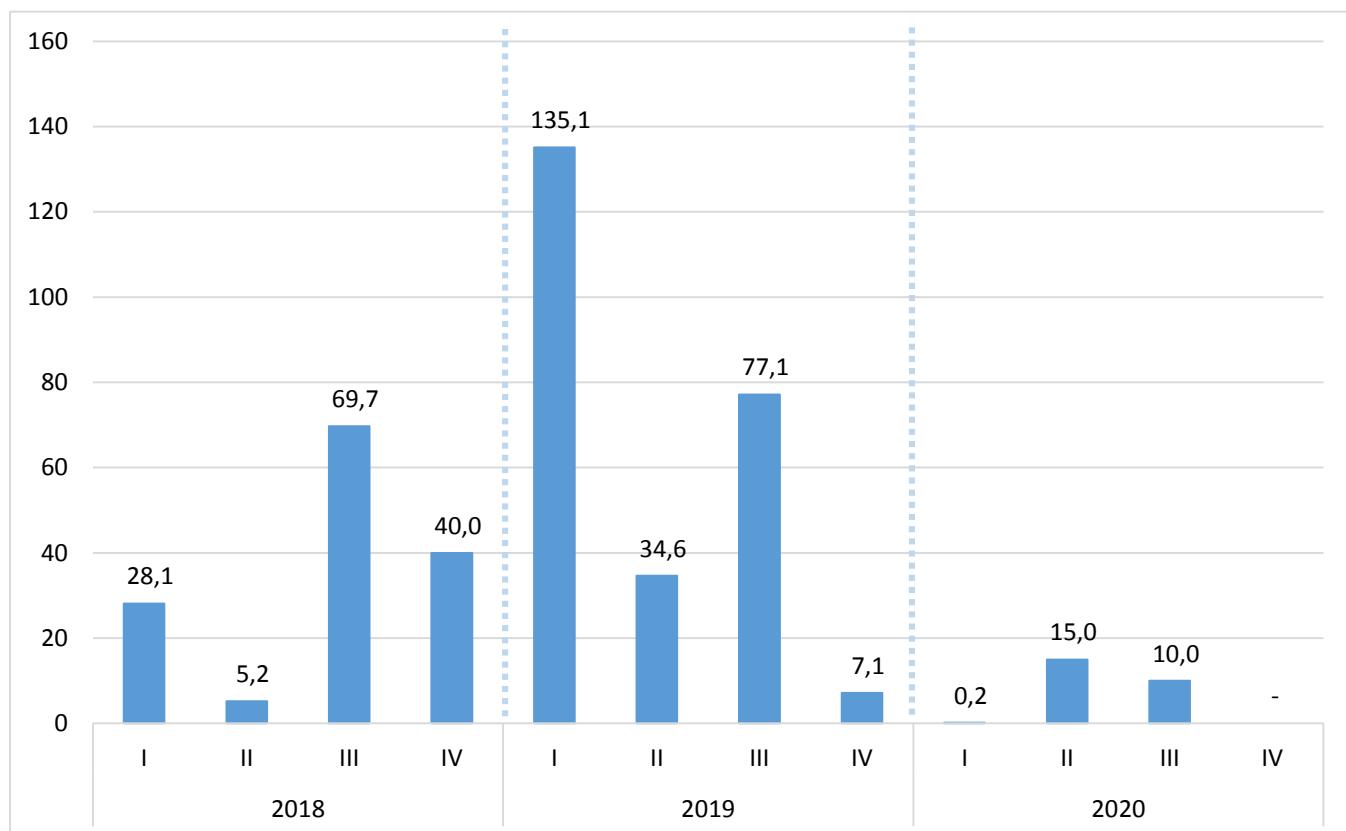

## CAPITAL ACCOUNT

The positive balance of the capital account for 2020 amounted to USD 25.2 million (USD 254.0 million for 2019) as a result of large transfers.

Figure 14

### CAPITAL ACCOUNT RECEIPTS

(mln. USD)

## FINANCIAL ACCOUNT

According to the results for 2020, the negative balance of the financial account amounted to USD 4.0 billion (*reduction accounted for USD 1.0 billion in comparison with the previous year*). The main reason for the continued deficit of the financial account is the growth of liabilities on loans and borrowings in the amount of USD 7.1 billion (of which USD 3.3 billion falls on the government sector) and foreign direct investment - by USD 1.7 billion and portfolio investment – USD 1.4 billion, which was formed after issuing Eurobonds by government and banking sector. In operations of international reserve assets for 2020 there was a significant increase in the foreign exchange component in the amount of USD 1.8 billion due to the sale of non-monetary gold. (Table 3).

## DIRECT AND PORTFOLIO INVESTMENT

Net inflows of foreign direct investment<sup>4</sup> for 2020 amounted to USD 1.7 billion. The attraction of foreign direct investment to the country was to some extent offset by the repatriation of parts of the investments made under production sharing agreements (PSA). Against the backdrop of the crisis in the global economy, net foreign investment in capital decreased by 1.6 times and amounted to USD 1.3 billion, while the volume of reinvestment of income by foreign investors reduced by 1.3 times.

In the structure of liabilities on direct investments, investments in loan instruments remain at the same level of previous year. Thus, during the coronavirus pandemic, financial support in the form of loans from parent companies amounted to USD 153 million. At the same time, due to a decrease in natural gas production, net payments under the PSA amounted to just under USD 276 million. ([Figure 15](#)).

Figure 15

### CHANGE IN DIRECT INVESTMENT COMPONENTS<sup>5</sup>

<sup>4</sup> Data on direct investment is collected by survey of State committee of Republic of Uzbekistan on statistics.

<sup>5</sup> Data on direct investment is compiled according to BPM6. IMF, 2009.

For 2020 significant net increase was recorded in structure in portfolio investment liabilities. The reason for this increase was successful issuance of two international bonds of the Republic of Uzbekistan at the end of the year in the amount of USD 555 million and UZS 2 billion. At the same time, Eurobonds were placed on world capital market by the National bank and Ipoteka bank for a total amount of USD 600 million. As a result, the balance of portfolio investment operations at the end of 2020 was negative in the amount of USD 1.4 billion.

## OTHER INVESTMENTS

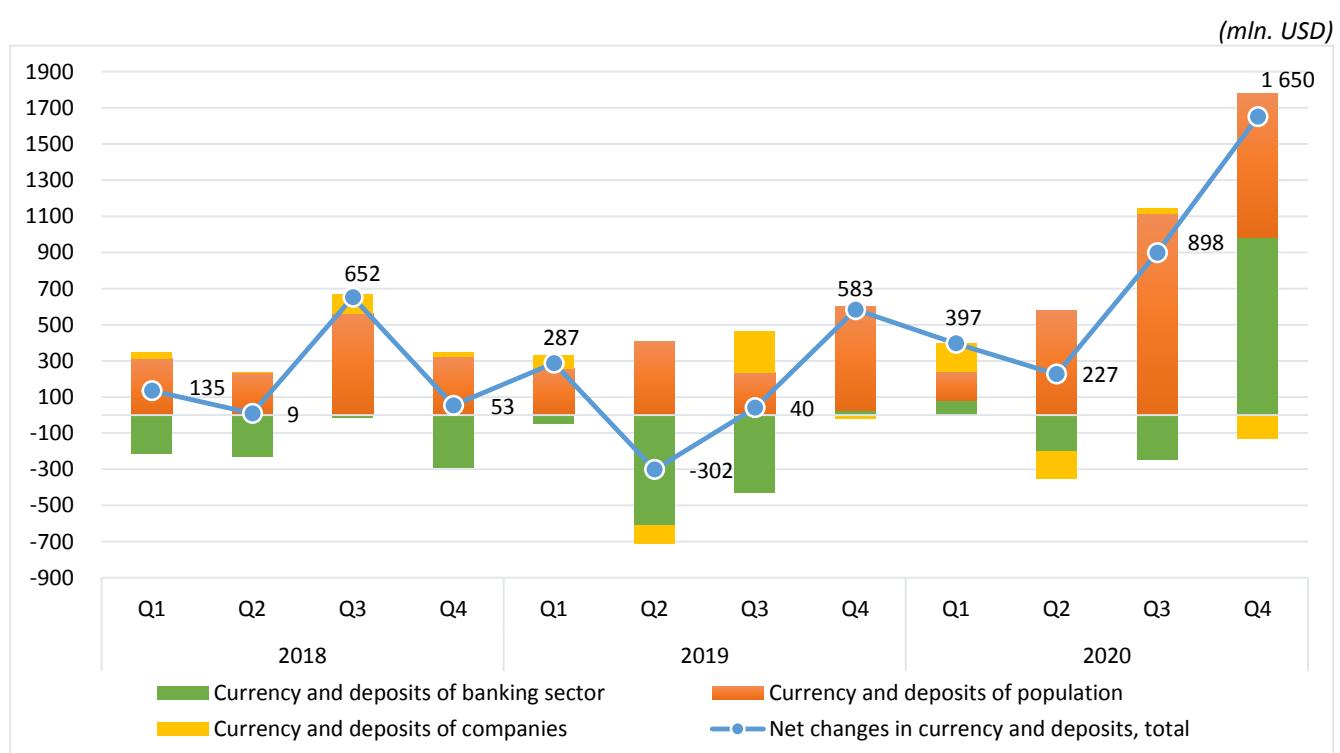

### Assets

Net increase of assets in the item «Other investments» amounted to USD 5.3 billion in 2020. Main components of the item «Other investments» were currency and deposits of residents, as well as trade credits and advances (*accounts receivable*), which grew by USD 3.2 billion and USD 2.1 billion respectively.

The analysis of the component «Currency and deposits» by sectors of the economy showed that the main volume of operations falls on other sectors, since growth of the population savings in foreign currency are taken into account in this sector. At the same time, if the assets of the population in foreign currency are constantly increasing due to the repatriation (return) of incomes of citizens of the Republic of Uzbekistan working abroad, then the volume of expenditures increased receipts of funds to the foreign accounts of residents - legal entities in 2020. (Figure 16).

Figure 16

### NET CHANGES IN THE COMPONENT “CURRENCY AND DEPOSITS”

Net changes in the currency and deposits of the banking sector (balances of correspondent accounts and cash departments) were mainly formed as a result of the need to make payments on import operations of residents. As a result, for 2020, net assets of Uzbek banks in foreign currency and deposits increased by USD 617 million. The main reason for that was net assets increase observed in the IV quarter of 2020 in the amount of USD 982 million.

The balance of operations on trade credits and advances provided to non-residents under foreign trade contracts was positive and amounted to USD 2.1 billion. This increase in accounts receivable may be due to delays in production associated with the introduced quarantine measures.

### Liabilities

For 2020, net increase of liabilities of «other investments» section accounted for USD 7.9 billion (*increased by USD 2.5 billion*). This growth was largely driven by a sharp increase in the «Loans and borrowings» component, as well as trade credit and advances.

An analysis of the «loans and borrowings» component by sector of the economy showed that since 2018, the rate of accumulation of borrowings by the general government sector has maintained a tendency of sharply increasing liabilities. Thus, the net acceptance of liabilities on external loans of the government sector amounted to USD 3.3 billion (USD 2.8 billion a year earlier). These funds are intended to be used to mitigate the effects of the global pandemic, health-care system support and to further finance state targeted programs for the development of industries and regions (infrastructure projects). ([Figure 17](#)).

The net growth of liabilities on loans and borrowings of the banking sector for 2020 was equal to USD 2.5 billion, which is 1.5 times more compared to the same indicator in 2019. This growth was associated with the intensification of the activities of domestic banks to attract funds from foreign banks and international financial institutions for subsequent refinancing.

The balance of foreign borrowing operations of other sectors remained at the level of the corresponding period of previous year (*USD 1.2 billion*), which is explained by the onset of maturity of large loans received by enterprises in energy sector.

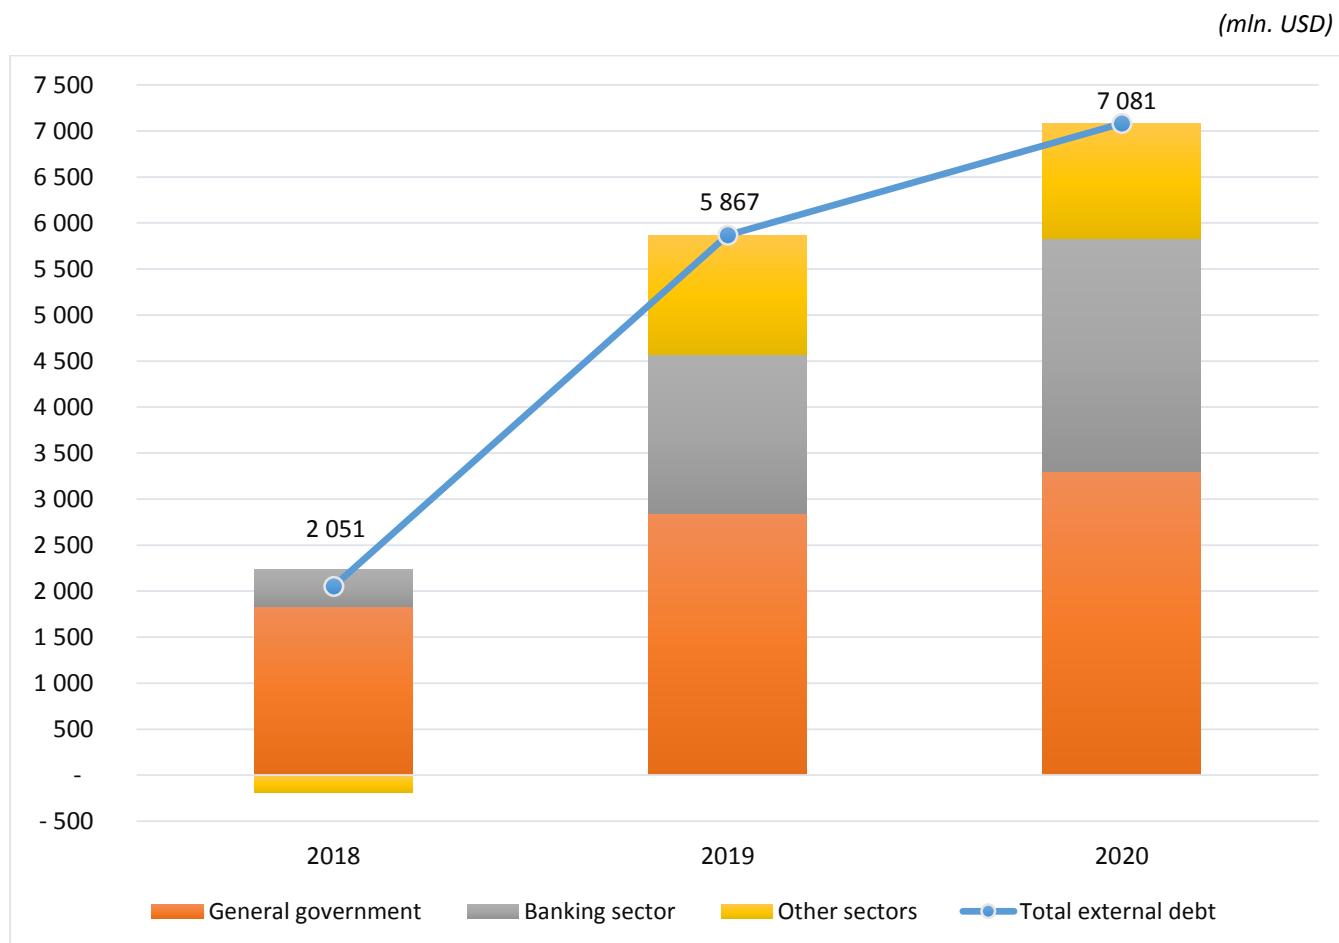

The net increase in liabilities on the item "Trade credits and advances" (accounts payables) for 2020 amounted to USD 569 million.

This is due to the fact that despite the decrease in foreign trade turnover and the repayment of a significant part of the debt to non-residents in the second quarter of this year, during the period of introduction of quarantine measures, residents could accumulate advance payments under export contracts and liabilities payable under import contracts.

It is necessary to note that the residuals of trade credits and foreign currency savings of the population are partially compensated. For this reason, flows on trade credits and advances, as well as household savings in foreign currency are reflected taking into the account above mentioned factors.

Figure 17

### NET CHANGES IN THE COMPOSITION OF “LOANS AND BORROWINGS” COMPONENT

### Insert 1. Operations on liabilities in financial account.

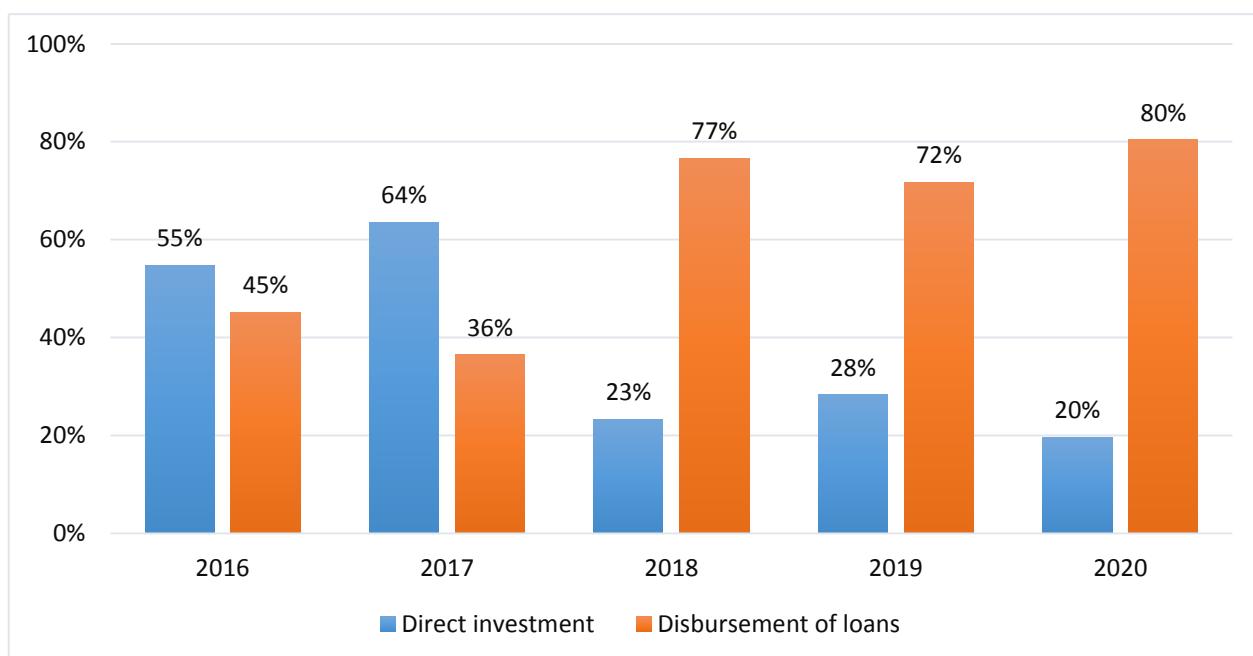

The analysis of operations on liabilities in the financial account showed that flows on liabilities mainly consist of «Loans and borrowings» and «Foreign direct investment».

For the period 2018-2020, share of «Loans and borrowings» prevailed over «Direct investments». This phenomenon is mainly due to an increase in borrowing by the general government sector in order to finance state targeted programs for the development of industries and regions. Also, the volume of foreign direct investment decreased in 2018 due to increase in payments in the framework of the PSA and introduced quarantine measures in 2020.

According to the results for 2020, due to a slowdown in economic growth in many countries of the world, net growth in foreign direct investment decreased, while loans and borrowings reached the largest share (80%) in the net growth of liabilities to the rest of the world, because the general government and the banking sector continue actively attracting external borrowings.

At the same time, the large volumes of inflow of funds observed in the operations of the financial account for 2020 may also imply an increase in import volumes in subsequent periods.

**Share of “Direct investments” and “Loans and borrowings”  
in the net growth of liabilities in the financial account\***

\*Diagram reflects components with largest shares.

Transaction data are shown on a net basis.

Direct investments include loans from parent companies.

Loan disbursements exclude loans from parent companies.

## II. INTERNATIONAL INVESTMENT POSITION OF THE REPUBLIC OF UZBEKISTAN

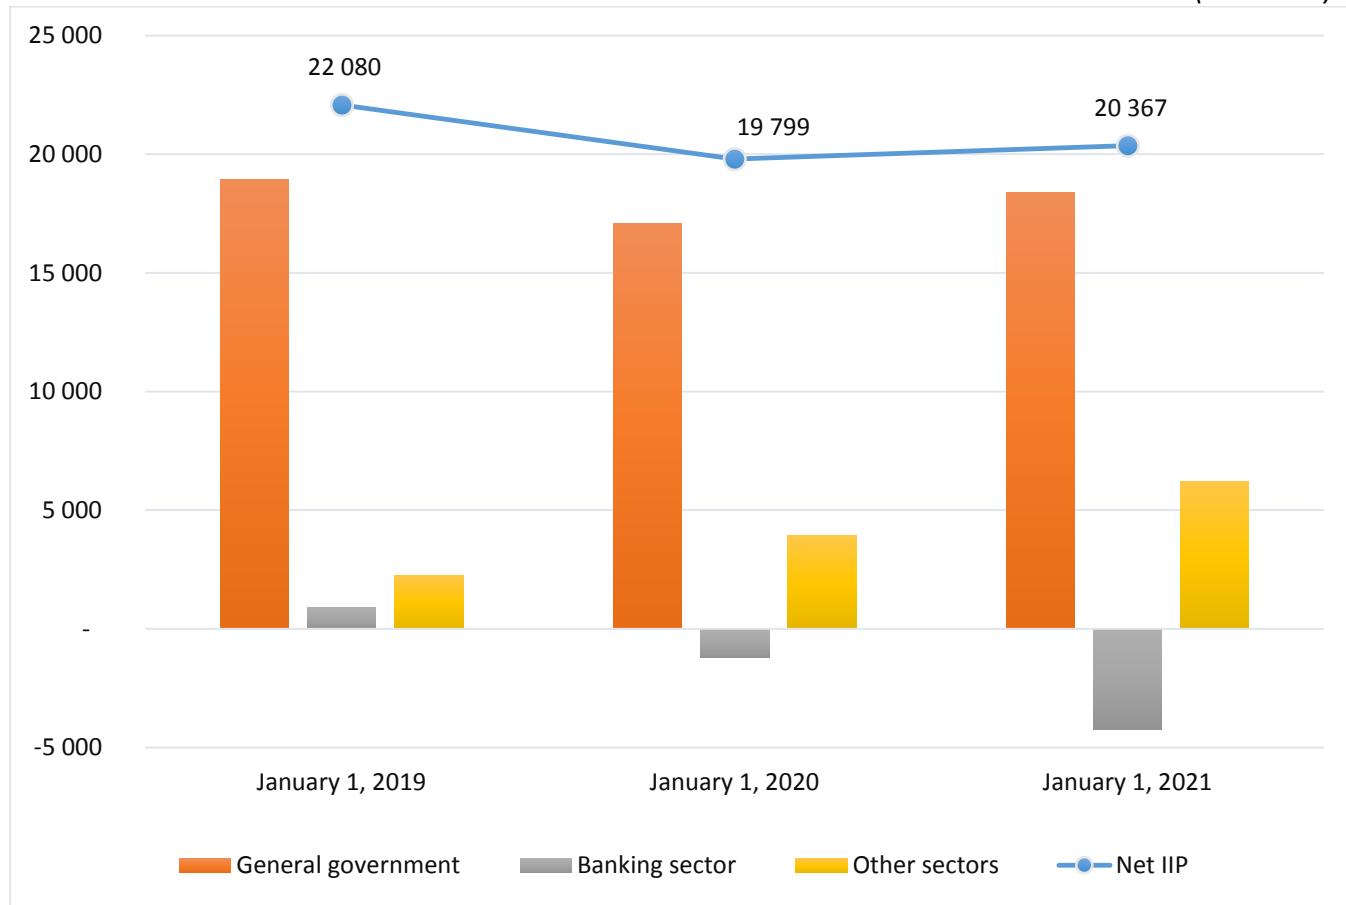

For 2020, the total volume of foreign assets and external liabilities of the country amounted to USD 65.9 billion and USD 45.6 billion respectively. In this regard, the net investment position of the Republic of Uzbekistan increased by USD 567.6 million and as of January 1 of this year amounted to USD 20.4 billion. Analysis of changes in the net investment position for considered period showed that despite the negative balance of the financial account, non-operational changes<sup>6</sup> had a positive impact on the improvement of international investment position of the country.

An analysis of the international investment position by sectors of the economy showed that for 2020, the general government sector<sup>7</sup> and other sectors remained as «net creditor»<sup>8</sup>, while banking sector was «net borrower». (Figure 18).

Figure 18

### NET INVESTMENT POSITION BY SECTOR OF ECONOMY

(mln. USD)

<sup>6</sup> Non-operational changes consist of exchange rate, price and other changes that are not included in the financial account as operations.

<sup>7</sup> The general government sector includes ministries and institutions of general government, as well as the Central Bank. The banking sector includes all commercial banks

<sup>8</sup> Net creditor - assets of the sector in question exceed its liabilities; Net borrower - liabilities of the sector under consideration exceed its assets

Moreover, it should be noted that despite the active attraction of external borrowings by the state and banking sectors, the improvement in the net investment position was mainly due to increasing of foreign currency reserves and positive dynamics of the world gold price.

## GENERAL GOVERNMENT

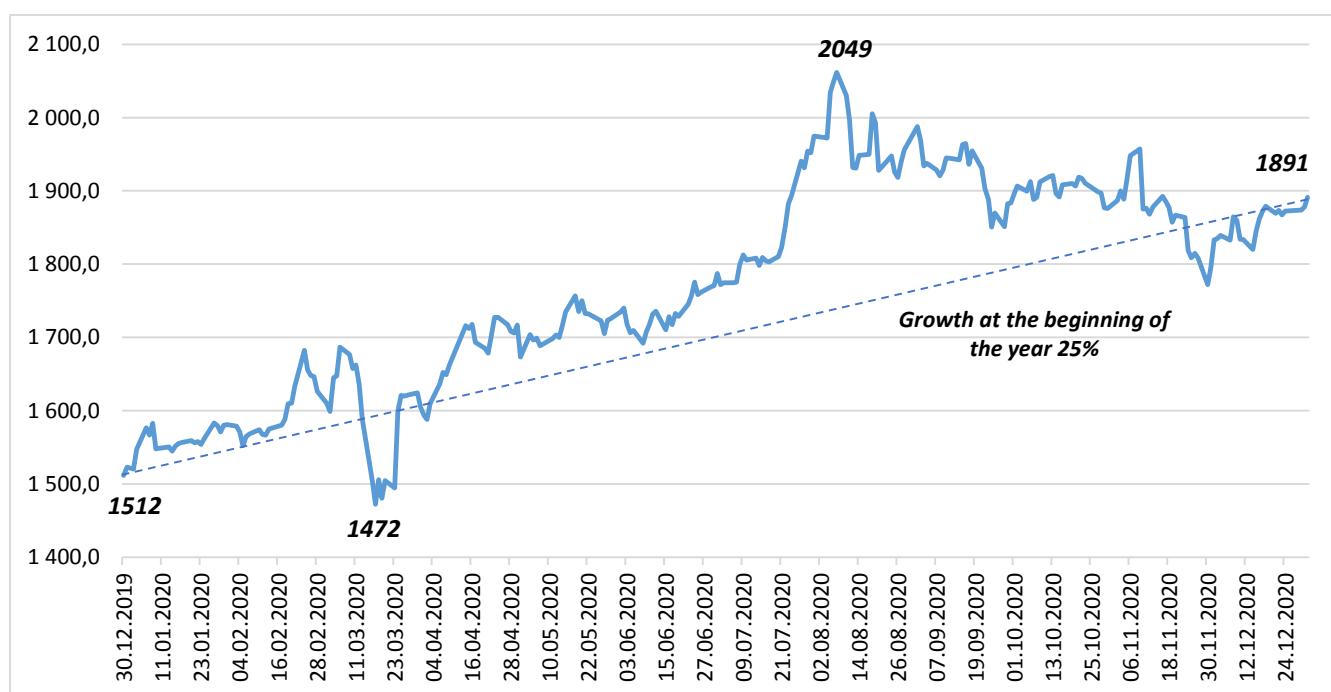

### Assets

For 2020, total assets of the general government sector increased by USD 5.7 billion, due to the positive impact of revaluation of monetary gold. So, in case of increased volatility of quotations in international financial markets, the price of gold, as a "safe asset", increased from 1511.5 to 1891.1 dollars / troy ounce, which had a positive effect on the investment position of the government sector ([Figure 19](#)).

Figure 19

### WORLD PRICE OF GOLD DYNAMICS

(USD/tr. ounce)

### Liabilities

Liabilities of general government mainly consist of government external debt. So, as a result of attracting new borrowings, liabilities to non-residents on loans and borrowings increased by USD 3.6 billion. Also there was placement by Ministry of Finance in the IV quarter of 2020 of Eurobonds with a nominal value of USD 555 million and UZS 2 billion sums in international capital markets which totaled USD 822 million.

## BANKING SECTOR

### Assets

For 2020 the external claims of commercial banks increased by USD 635 million, and stood by USD 2.8 billion as of January 1, 2021. The main reason for the increase in the balance of foreign exchange and deposit and on nostro accounts in foreign banks is the transfer of funds to commercial banks from the placement of Eurobonds.

### Liabilities

For 2020, external liabilities of the banking sector increased by USD 3.7 billion. As analysis showed the growth of liabilities was observed in the components such as «Loans and borrowings» (*increased by USD 2.7 billion*) and «Currency and deposits» (*increased by USD 205 million*), as well as «Portfolio Investments» (*growth due to issue of international bonds by two banks for USD 300 million, taking into account the world price - USD 636 million*).

Thus, as of January 1, 2021, 76,5% of the banking sector's liabilities to non-residents fall on loans and borrowings from foreign banks and international financial institutions, having decreased as compared to the previous year, mainly due to their issuance of Eurobonds. ([Figure 20](#)).

- Financial derivatives
- Currency and deposits
- Loans

## OTHER SECTORS

### Assets

In the structure of foreign assets of other sectors for 2020, an increase amounted to USD 4.7 billion. The growth in assets in the component "Currency and deposits" in the amount of USD 2.6 billion, which increased due to the repatriation (return) of incomes of citizens of the Republic of Uzbekistan working abroad. An increase in the amount of USD 2.1 billion (*USD 2.0 billion increase a year earlier*) was also recorded in the «Trade credits and advances» (*accounts receivable*) component.

### Liabilities

Foreign liabilities of other sector in January-December 2020 increased by USD 2.4 billion. The growth of liabilities was observed mainly due to components «Loans and borrowings», «Direct investments» and «Trade credit and advances» component, in the amount USD 1.3 billion, USD 603 and 569 million respectively, while the components «Other accounts payable», a decrease balance of USD 112 million.

In the «Direct Investment» component, the amount of receipt from foreign investors under the PSA was USD 377 million<sup>9</sup>, and the accrual of compensation payments to foreign investors amounted to USD 653 million. Thus, in the PSA enterprises, the net decrease in investment was equal to USD 276 million.

For non-financial enterprises, with the exception of PSA enterprises, for 2020, the net inflow of foreign direct investment in share capital was USD 1.2 billion, reinvestment of income was USD 503 million and investments in the form of debt instruments from parent companies were equal to USD 153 million. Thus, the net growth in investment in non-financial enterprises was equal to USD 1.9 billion.

For non-banking financial institutions, net growth in investments in share capital (*insurance and leasing companies*) amounted to USD 2.8 million. Reinvested earnings increased by USD 972 thousand.

Furthermore, there were other negative non-operational changes in external liabilities of direct investments of other sectors in the amount of USD 1 billion, which are associated with the detected statistical discrepancies in the data for previous periods<sup>10</sup>.

---

<sup>9</sup> Receipts from foreign investors under the PSA are estimated as an inflow of foreign investment and are recorded as direct investment. The above funds have been received to special account of PSA operator opened abroad as part of the project.

<sup>10</sup> The data was revised based on updated information from the State Committee of the Republic of Uzbekistan on Statistics and PSA operators.

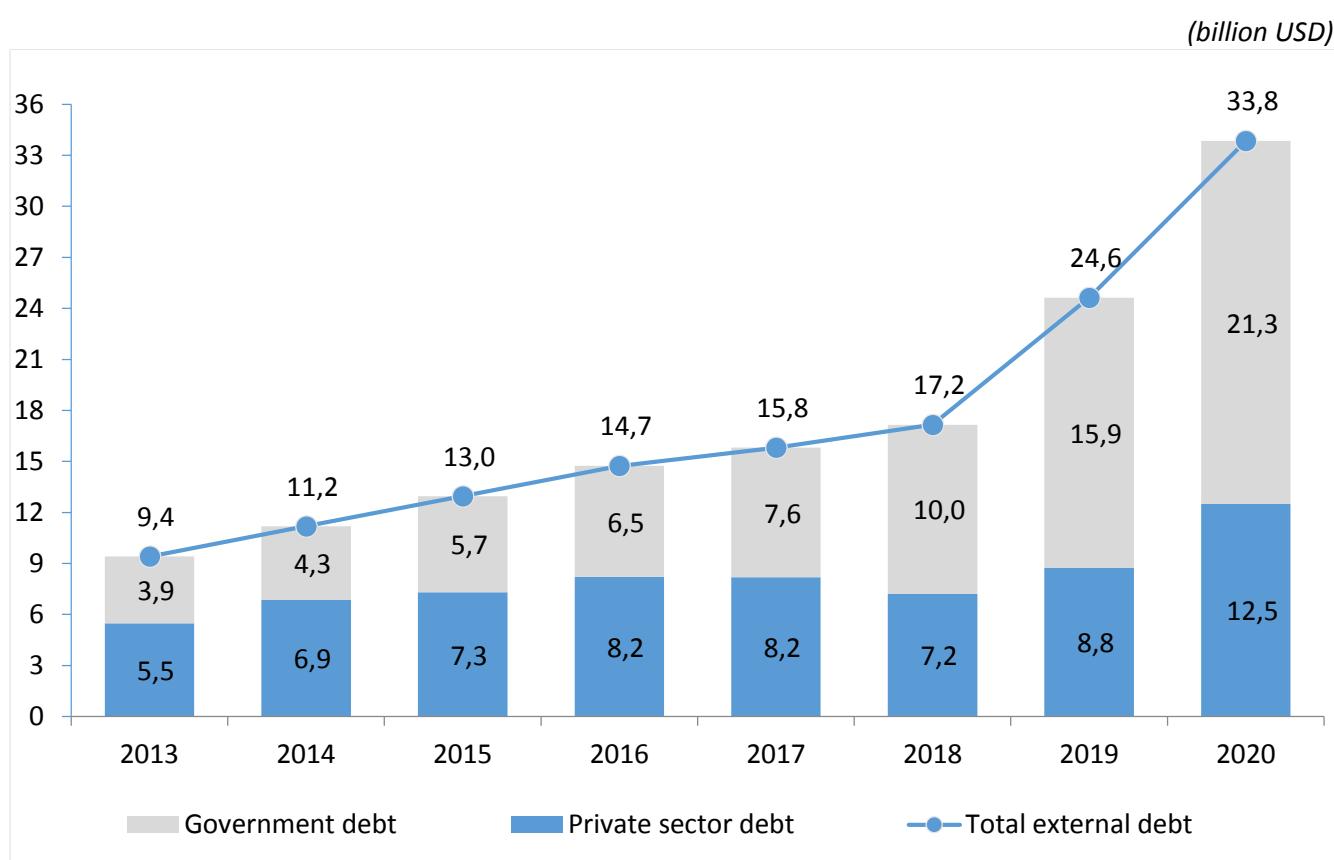

### III. EXTERNAL DEBT OF THE REPUBLIC OF UZBEKISTAN

Total external debt reflects the liabilities of residents to nonresidents, which require the payment of principal debt and interests. Total external debt includes the debt of government and guaranteed by government (*further – government external debt*), and non-guaranteed external debt (*further- private sector external debt*).

Total external debt maintains a growing trend. This process is explained, for government debt, by the attraction of new external borrowings to mitigate the socio-economic impact of the crisis caused by the spread of the COVID-19 virus and to finance government programs for the development of industries and region, while private sector debt started to increase mostly due to the growth in borrowings of commercial banks. Also sharp increase in government external debt can be observed from 2019 (Figure 21).

Figure 21

#### TIME SERIES OF TOTAL EXTERNAL DEBT OF THE REPUBLIC OF UZBEKISTAN<sup>11</sup>

<sup>11</sup> At the beginning of 2018, the methodology for calculating external debt was revised, and starting from 2018, when calculating the debt on foreign borrowings, accrued but unpaid interest is also taken into account.

The volume of total external debt of the Republic of Uzbekistan as of January 1, 2021 stood at USD 33.8 billion, showing an increase by 37.4% or USD 9.2 billion in comparison with the beginning of 2020<sup>12</sup> ([Table 4](#)).

Table 4  
**STRUCTURE AND CHANGE OF TOTAL EXTERNAL DEBT<sup>13</sup>**

Sector of economy	External debt as of			Share	Changes for 2020

Other sectors	463,4	601,6	1 335,2	4%	733,5

<sup>12</sup> Total external debt includes debt provided by parent companies.

<sup>13</sup> Government external debt is composed of debt raised by government and debt received against guarantee of government. Private external debt is composed of external borrowings of business entities including government enterprises, which are not guaranteed by government.

Table 5

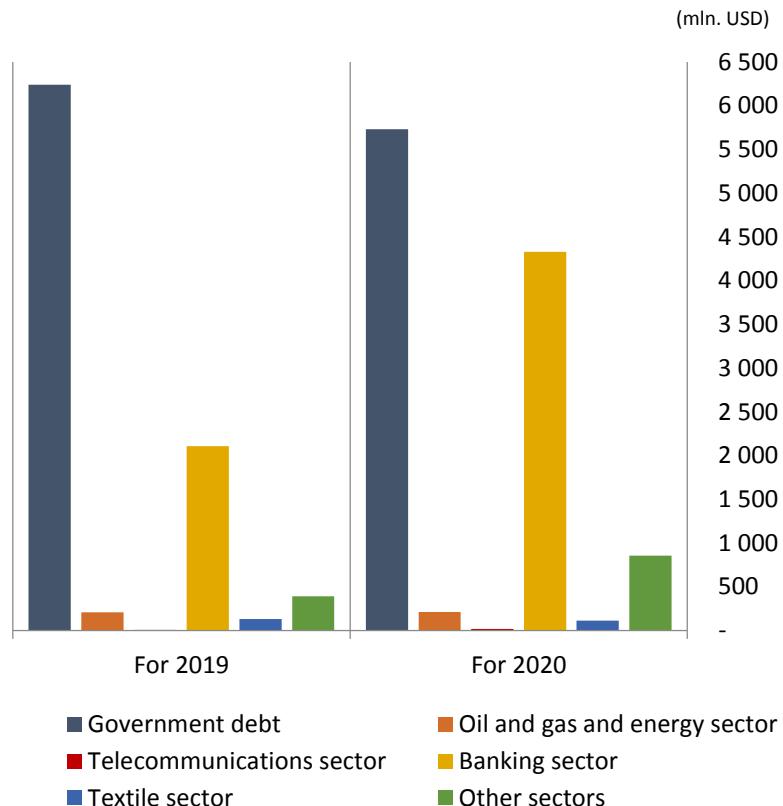

**THE STRUCTURE OF EXTERNAL DEBT ON THE BASIS OF MATURITY<sup>14</sup>**  
*(as of January 1, 2021)*

Maturity	Amount of debt (mln. USD)	Share (in %)
up to 1 year	1 624,4	4,8%
from 1 to 5 years	5 745,9	17,0%
from 5 to 10 years	3 446,8	10,2%
more than 10 years	23 024,8	68,0%
<b>Total:</b>	<b>33 841,8</b>	<b>100%</b>

Increase in external debt of the government sector for 2020 accounted for USD 5.5 billion. Due to new borrowing new external debts and issuing Eurobonds, nominated in sums and in dollars. Liabilities of private sector increased by USD 3.7 billion, due to borrowings of banks.

It is important to note that for 2020 the private sector attracted loans in the amount of USD 5.5 billion. Borrowings, mainly, were attracted by commercial banks – USD 4.3 billion, including two banks issued debt securities with overall price of USD 600 million. Oil and gas and energy sector attract – USD 211.8 million, and other sectors of the economy – USD 984.0 million (Figure 22).

Figure 22  
**Attraction of external debt by sectors of economy**

<sup>14</sup> External debt is divided based on initial term of borrowings maturity

In addition, during the considered period, the government sector made principal payments in the amount of USD 651.3 million and interest payments in the amount of USD 380.2 million ([Figures 23, 24](#)).

The private sector made principal debt payments in the amount of USD 2.0 billion and interest payments in the amount of USD 370.8 million.

Besides, oil and gas and energy sector enterprises as well as banking sector are making the majority of principal and interest payments ([Figures 23, 24](#)).

*Appendices 14.1–14.8* present data on the receipts and repayment of private foreign debt for 2020, as well as forecasts for the repayment of principal and interest on private external debt by type of creditors and borrowers in accordance with international reporting system.

## METHODOLOGICAL COMMENTS

Since 2018, the Central bank started the compilation of the balance of payments, international investment position and external debt in accordance with the Balance of Payments and International Investment Position Manual (BPM6. IMF, 2009).

The purpose of compiling external sector statistics (balance of payments and international investment position) is to provide an integrated foundation for analyzing the foreign economic activity of the country, including its indicators, exchange rate policy, reserve management and external vulnerability to possible risks.

The balance of payments, international investment position and external debt of the Republic of Uzbekistan are published on quarterly basis.

Balance of payments, international investment position, and external debt statistics can be revised regularly based on the latest available data.

The current methodological comments are derived from Balance of Payments and International Investment Position Manual (BPM6. IMF, 2009) and intended to help users to better understand the foundations, principles, and structure of the balance of payments.

### **1.1. Methodological standards of the balance of payments**

The balance of payments (BOP) is a systemized, macroeconomic and statistical report, which reflects the summarized economic transactions between residents and non-residents for a certain period. The data is classified and compiled based on BPM6 and in accordance with the international standards.

#### **Definitions and main principles.**

The structure of balance of payments consists of the current account, the capital account and the financial account. The current account covers the trade balance of goods and services, as well as balances of primary and secondary income. The

capital account reflects acquisition/disposal of non-produced, non-financial assets and capital transfers. The financial account is divided into direct investment, portfolio investment, financial derivatives, other investments and reserve assets.

The sum of current and capital account balances is net lending to the rest of the world. Conceptually, it is equal to the balance of financial account. Financial account operations plus exchange rate, price and other changes reflect the difference between the beginning and the end stocks of the international investment position.

**An economic unit** is considered as a resident unit when it has a center of economic interest and a permanent location in the economic territory of a country for more than one year. At the same time for individuals, residence is determined regardless of citizenship.

**The economic territory** of a country consists of its geographic territory administered by a government and is subject to the same legislation.

An individual or legal person is considered to **have a center of economic interest** within a country when they have some location – a dwelling, place of production or other premises – within the economic territory of the country for either indefinitely or over a finite but long period of time.

#### **Economic sectors**

The financial account components of the BOP – direct investment, portfolio investment, financial derivatives, and other investment – are disaggregated by the economic sector of the residents involved in the operations. Four economic sectors are distinguished:

- Central bank – the Central Bank of Uzbekistan;
- Deposit-taking corporations, except central bank
- commercial banks of Uzbekistan;
- General government – which comprises central government institutions and local public authorities;

- Other sectors, subdivided in two categories: other financial corporations (microfinance organizations, insurance companies and others) and non-financial corporations, households and non-profit institutions serving households (NPISH)

### **Types of Transactions**

- exchanges – most transactions likely to be recorded in the balance of payments can be characterized as exchanges in which one transactor provides an economic value to another transactor and receives equal value in return. Most transactions reflected in the balance of payments can be characterized as exchanges;
- transfers – transactions in which one transactor provides economic value to another transactor and does not receive equivalent value in return;
- imputed transactions – when transactions are imputed and entries are made in the balance of payments accounts when no actual payment occurs i.e. accrual of interest.

The transactions mentioned above are reflected in the accounts of BOP as follows:

**Goods** comprise transactions with goods that cross the border of the country and either involve change of ownership between residents and non-residents (general merchandise, goods procured by carriers, and non-monetary gold).

**Services** cover all types of services that are performed by residents for nonresidents and vice versa and are divided into following categories:

- manufacturing services of physical inputs owned by others (nonresidents);
- maintenance and repair services not included elsewhere;
- all types of transportation services (passenger, freight and others)
- travel services (expenditures of nonresident travelers for business and personal purposes during their stay in Uzbekistan and expenses of resident travelers for business and personal purposes during their stay abroad).
- services of financial intermediaries;

- remaining types of services (construction; insurance services; computer and information services; other business services; personal, cultural and recreational services; government services; and services not included in other categories)

**Primary income** indicates two types of flows between residents and nonresidents:

- compensation of employees in the form of salaries, wages or other benefits, in cash or in kind, paid by employers to employees when the parties have a different residency status. These remunerations also include taxes paid in the host country, which are reflected in an opposite side entry in the current transfers item. Employees' expenditures in the host country are registered in the item "Travel" of article "Services";
- investment income covers income receivable, associated with residents' holdings of external financial assets, or payable, associated with residents' liabilities to nonresidents. Investment income consists of direct investment income, portfolio investment income, income on other investment and on reserve assets. Investment income is subdivided into dividends, reinvested earnings, interest and investment income attributable to policy-holders in insurance, pension schemes, and standardized guarantees, and to investment fund shareholders.

**Secondary income** shows current transfers between residents and non-residents. It is an offsetting entry for real resources or financial items provided without quid pro quo by one economy to another. The most common examples of current transfers are grants and humanitarian aid and technical assistance. This component also covers current international cooperation, current taxes on income, personal transfers, social benefits, and net nonlife insurance premiums.

**Capital account** shows capital transfers receivable and payable between residents and nonresidents, and the acquisition and disposal of non-produced, nonfinancial assets. Transfer is considered as capital if it is intended for acquisition of fixed assets or capital construction.

Non-produced nonfinancial assets include intangible assets covering contracts, leases, licenses, and marketing assets; and natural resources (generally land).

**Financial account** assets and liabilities cover functional categories: Direct investment, portfolio investment, financial derivatives, other investments and reserve assets.

**Direct investment** is a category of international investment in which a resident entity in one economy (the direct investor) acquires a lasting interest in an entity resident in another economy (the direct investment enterprise). A direct investor in an enterprise is an investor that owns 10% or more of ordinary shares or voting power (for an incorporated enterprise) or the equivalent (for an unincorporated enterprise). The “direct investment” relationship is extended to enterprises in which goods and/or money are invested from enterprises associated with them: to capital investment between associated enterprises, branches and their head offices. Direct investment includes equity capital, reinvested earnings and other earnings.

**Portfolio investments** are in the form of equity and investment fund shares and debt securities. Debt securities traded in international markets are recorded at market price.

**Financial derivatives** are financial instruments that are linked to a specific financial instrument, indicator, or commodity and through which specific financial risks can be traded in financial markets in their own right. Financial derivatives comprise transactions with swaps, options, guarantees, deposits, etc., and are registered on a net basis.

**Other investments** are primarily divided into net acquisition of financial assets and net incurrence of liabilities. Other investment covers other equity, currency and deposits, loans, insurance, pension, and standardized guarantee schemes, trade credit and advances, and other accounts receivable/payable.

Other securities include investments that are not direct investments or reserve assets. Other securities are not in the form of securities; therefore, they are not included in securities.

Currencies and deposits include all claims to the Central Bank and commercial banks, in some cases other institutional sectors, in the form of cash banknotes and coins, as well as deposits.

Insurance, pension and standard guarantee programs include (a) insurance technical reserves (except life insurance), (b) rights to life insurance and annuity payments, (c) rights to receive a pension, (d) pension fund claims on companies, that manage pension funds, (e) eligibility for benefits not related to pension schemes, (e) provisions to cover standard guarantees.

Trade credit and advances arise when payment for goods or services is not made at the same time as the change in ownership of a good or provision of a service. If a payment is made before the change of ownership, there is an advance.

Other accounts receivable/payable includes accounts receivable or payable other than those included above.

**Special drawing rights (SDRs)** are international reserve assets created by the IMF and allocated to members to supplement existing official reserves. SDRs are held only by the monetary authorities of IMF members and a limited number of international financial institutions.

**Reserve assets** are those external assets that are readily available to and controlled by monetary authorities for meeting balance of payments financing needs, for intervention in exchange markets, and for other related purposes.

The BOP is constructed on the basis of a **double entry book-keeping system**. Every recorded transaction is represented by two entries with equal values. One of these entries is recorded under credit; the other is recorded under debit. For example, in the case where an export operation was made, the transaction value in the BOP will be reflected as credit in “Export” and as debit in “Assets – currency and deposits”. The sum of all credit and debit entries should equal to zero. In practice, however, the accounts frequently do not balance. Data for balance of payments estimates are often obtained from different sources and, as a result, there may be a summary “net errors and omissions”.

**Credit entries** are recorded for exports, primary and secondary income received and acquisition of non-produced non-financial assets.

**Debit entries** are recorded for imports, primary and secondary income paid and disposal of non-produced non-financial assets.

The international accounts follow **net recording in the financial account**. Net recording means aggregations or combinations that show net changes (increases less reductions) in a particular financial asset or a liability category on the same side of the balance sheet. Transactions on financial assets and liabilities are shown under "Net acquisition of financial assets" and "Net incurrence of liabilities". Net acquisition of assets equals increase of the asset less decrease of the same asset. Transaction with positive sign means increase, while negative sign – decrease. Calculation of net acquisition of financial liabilities are in the same way as assets are calculated.

**Market prices** are the basis for valuation in the international accounts. Market prices for transactions are defined as amounts of money that buyers are willing to pay for acquiring something from sellers who, in his/her turn, has willing to sell. The exchanges are made between independent parties and on the basis of commercial considerations only.

**Time of transaction recording** is real time or estimated time when ownership change occurred. This is the time when transaction was recorded in financial reports.

### **Standard and analytical presentation of BOP**

Standard presentation - BOP items are grouped corresponding to national accounts and other macroeconomic statistics standard classifications.

Analytical presentation denotes reorganization of standard BOP items in a way where international transactions balance is financed with international reserves, IMF or other international donor credits or other exceptional financing items.

### **1.2. Sources of data and commentary on the compilation of components.**

The main sources of information for compiling balance of payments data are the State Customs Committee, State Statistics Committee, enterprises and operators' data on production sharing agreements (PSA), State Border Protection Committee, State Personalization Center, Central Bank, Ministry of Finance, Ministry of Foreign Affairs, and other organizations.

Along with the reports received, some changes are made to improve the quality of the data and ensure their compliance with the methodology.

#### **Data on imports/exports of goods**

Export and import data are reflected in FOB prices in the balance of payments. Data on the import and export of goods are obtained from the State Customs Committee. CIF prices of imported goods are adjusted based on the coefficients calculated by weight, taking into account the mode of transport at the border and the region of shipment of goods.

Official data received from the State Customs Committee are supplemented with data on gold exports and are adjusted based on estimates of the Central Bank regarding shuttle exports and imports, as well as additional data obtained and identified statistical discrepancies in mirror statistics for the main trading partners.

Estimation of the value of goods imported/exported by individuals for subsequent resale is calculated as the product of the number of "shuttles" and the average value of the goods imported and exported by them. The average value has been derived on the basis of a quarterly survey conducted at border posts and airports in all regions of the country.

#### **International services**

Initial data for the exports and imports of transport services are obtained from the State Committee on Statistics. Additional data are obtained and calculations are made for the most significant and missing components. In particular:

***For transport services***

- estimations are made on the amount of imported air, rail and road transport services. For example, the import of air transport is calculated by multiplying the number of persons who entered and left the country by air, minus the number of citizens of Uzbekistan transported by the national carrier, to the average price of a ticket to the main countries of departure of citizens of Uzbekistan;
- information on the amount of air transport exports is received from national air carrier, including the goods sold to foreign ships at airports in Uzbekistan and purchased by ships of Uzbekistan at foreign airports;
- information on the amount and value of goods transported for non-residents is obtained from Uzbekistan Railways;
- CIF-FOB corrections are added separately to the amount of imports for each mode of transport based on their share in total volume of imports.

***For travel services:***

- expenses of short-term workers during their stay abroad are added to the data of the State statistics committee on debit and credit of business travels;
- the amount of exports and imports of personal travel services (tourism) are calculated based on data from the border service and the results of a survey on tourist statistics conducted by the State Statistics Committee in May 2018. Since the coefficients generated by the results of the tourist survey of residents also include the amount of transport expenses, they are deducted from the debit of travel services in order to avoid double counting.

***For other services:***

- to reflect information on public services not included elsewhere, information obtained from the Ministry of Foreign Affairs is used;
- to reflect insurance services, data are obtained from insurance companies and adjustments are made if discrepancies are identified. In addition, the cost of the cargo insurance service, obtained

while calculating the CIF-FOB adjustment, is included in insurance services.

***Primary income***

- calculation of primary income is carried out on the basis of the cross-border money remittances data, generated by the Central Bank and cash imports of foreign currencies, formed by the State Customs Committee until 2018. The data are complemented by an estimate of the income of residents working at embassies and international institutions in the territory of the Republic of Uzbekistan.

Calculation of wages of short-term workers is carried out in the methodology recommended by the IMF expert during the technical assistance mission. At the same time, the number of citizens of Uzbekistan who went abroad to work during the reporting and previous three quarters are multiplied to decreasing coefficients in order to determine the quantity of short-term workers in the calculations. The estimated number of short-term workers is multiplied by the average amount of their income to determine the total amount of their earnings. This approach also enables the determination of their travel expenses and mandatory payments in the form of taxes and patent fees.

- investment income is calculated on the basis of data from the Central Bank, commercial banks, the Ministry of Finance and enterprises operating on the basis of the PSA. Wherein, commercial banks provide data on accrued interest on unsecured private debt, while the Ministry of Finance presents data on accrued interest on loans attracted by the government or under its guarantee.

***Secondary income***

- personal transfers are calculated on the basis of cross-border money remittances data, generated by the Central Bank and cash imports of foreign currencies, formed by the State Customs Committee until 2018. The net earnings of short-term workers are deducted from the total amount of remittances into the country and the cash import of foreign currency by the citizens of Uzbekistan and the balance is indicated as a transfer;

- data on grants in monetary form are presented by commercial banks, while humanitarian assistance received in the form of goods is obtained from the database of the State Customs Committee;
- the Ministry of Finance provides information on the contributions of the Republic of Uzbekistan to international organizations.

### **Capital account**

- information on capital transfers is compiled on the basis of data obtained from commercial banks and other sources of data.

### **Financial account**

#### *Direct investment*

- data on direct investment are generated by using the results of a survey conducted by the State Statistics Committee. The form of the survey is based on the reporting forms recommended by the International Monetary Fund. Additionally, enterprises operating on the basis of PSA provide data on investments made. Furthermore, information on direct investment in commercial banks and other non-bank financial institutions is received from commercial banks and other non-bank financial institutions. Data on intercompany loans from related companies are submitted by commercial banks;
- direct investments of enterprises of Uzbekistan abroad are insignificant. Moreover, the determination of their real volume from administrative data is not feasible.

#### *Portfolio investment*

- data on portfolio investments are generated by using the results of a survey conducted by the State Statistics Committee. The form of the survey is based on the reporting forms recommended by the International Monetary Fund. Information on portfolio investment in commercial banks and other non-bank financial institutions is received from commercial banks and other non-bank financial institutions. Data on market prices of traded securities are derived from Bloomberg.

### *Other investment*

- data on external loans and balances of correspondent accounts are formed on the basis of data of the Central Bank, the Ministry of Finance and commercial banks;
- trade credits and advances are calculated on the basis of data received from commercial banks.

### **Reserve assets**

- source of information on reserve assets is the Central Bank.

### **1.3. Methodological standards of international investment position**

International Investment Position (IIP) of the Republic of Uzbekistan is compiled in accordance with the sixth edition of the Balance of Payments and International Investment Position Manual (BPM6, IMF, 2009).

The IIP shows the balance of the country's external financial assets and liabilities for a certain period of time. The IIP includes the full range of claims and obligations to non-residents from different institutional sectors: the Central Bank, depository corporations other than the Central Bank, the Government, and other sectors. The main articles of this report are identical to the articles of the financial account: direct investment, portfolio investment, financial derivatives, other investments and reserve assets.

The difference between financial assets and liabilities of the economy is a net investment position. Thus, a sector in the IIP can either be a "net lender" or a "net borrower".

The IIP is compiled in the form of a table reflecting flows and balances of operations.

### **1.4. Sources of information and the formation of data on the external debt of the Republic of Uzbekistan**

The external debt of the Republic of Uzbekistan consists of the outstanding balance of debt on foreign borrowings of residents of the Republic of Uzbekistan, as well as accrued but unpaid interest on those borrowings. External debt is divided into private sector external debt and government external debt.

Government external debt includes loans received by the government or under the guarantee of the government of the Republic of Uzbekistan.

The Ministry of Finance of the Republic of Uzbekistan provides data on the disbursements of funds, accrual of interest and payments related to the government external debt.

The external debt of the private sector consists of external borrowings received without the guarantee of the government of the Republic of Uzbekistan, including debt on loans provided by foreign parent companies. Information on the external debt of the private sector is provided by commercial banks.

Data on the external debt of the private sector are formed in the context of economic sectors (oil and gas and energy sector, banking, telecommunications, textile and other sectors).

Also, banks provide data on the forecasts relating to the future repayment of principal and interest.

Starting from 2020 along the transitioning to IMF Special data dissemination standard gross external debt is presented in accordance with External debt manual (IMF, 2013).

Following sectorization and detail is provided:

- a) Sectors: General government sector, Central bank, Commercial banks, Other sectors.
- b) Initial maturity: short term, long term.
- c) Instruments: currency and deposits, debt securities, loans, trade credits and advances, other debt liabilities.

Debt securities are provided at market value; memorandum shows debt securities in nominal value with accrued interest.

Intragroup financing (ex. loans from parent companies) are shown in separate line.

### **1.5. Legal basis of data compilation**

1. Laws of the Republic of Uzbekistan «On the Central bank of the Republic of Uzbekistan» and «On currency regulation» (new edition).

2. Decree by the President of the Republic of Uzbekistan dated January 9, 2018 № УП-5296

«On measures for fundamental improvement of activities of the Central bank of Uzbekistan».

3. Decree by the President of the Republic of Uzbekistan dated September 12, 2017 № Р-5054 «On measures to ensure openness and transparency of economic and financial data on Republic of Uzbekistan»

4. Decree of the Cabinet of Ministers of Uzbekistan dated April 3, 2018 № 263 «On measures to ensure compilation of external sector statistics of the Republic of Uzbekistan».

## GLOSSARY OF TERMS

Term	Description
<b>Cross-border money remittances</b>	Transfer of funds from sender to recipient through international payment systems in order to replenish to the recipient's account or issue in cash.
<b>Factor income</b>	Income derived from resource exploitation or production factors (land, labor, capital).
<b>Foreign trade turnover</b>	Economic indicator which measured in money equivalent to identify volume of foreign trade of country, group of countries or administrative-territorial formation (region) for a certain period of time: month, quarter, year. Turnover is equal to sum of export and import.
<b>Adjustments in balance of payments</b>	Necessary changes in coverage, classification, date of reporting or changes in price evaluation to meet requirements of balance of payments.
<b>Shuttle trade</b>	Refers to the activity in which individuals buy goods abroad and bring them for resale in domestic markets or vice versa.
<b>Export FOB</b>	International trade term of Incoterms which means that the seller fulfills his obligation to deliver when the goods have passed over the ship's rail at the named port of shipment. The seller has to bear costs of delivering goods to ship.
<b>Import CIF</b>	International trade term of Incoterms which means that the seller completed delivery when goods are loaded on the ship. Selling price includes price of good, freight, costs of transportation and insurance.
<b>Goods in ports</b>	Goods bought by non-resident carriers in domestic ports and vice versa. Includes goods like fuel, provision, supplies, ballast, fixing materials and etc.
<b>Non-monetary gold</b>	Includes all gold except monetary gold (gold bars owned by monetary authorities and stored as reserve assets). Not included – jewelry, parts that contain gold; they are recorded in export and import of goods.
<b>Special Drawing Rights</b>	International reserve assets issued and allocated by IMF to support reserves of country members.
<b>International Investment Position</b>	International investment position (IIP) – macroeconomic statement which shows volume and structure of financial assets and liabilities to non-residents.
<b>Production sharing agreements</b>	An agreement whereby the host country awards rights to execute exploration and extraction of minerals to a foreign investor on a reimbursable basis for certain period. Related work is executed at place which is specified in the agreement and investor bears all the expenses at its own risk.
<b>Net lender</b>	Economic entity whose assets exceed liabilities.
<b>Net borrower</b>	Economic entity whose liabilities exceed assets.

<b>Gross external debt</b>	Shows all liabilities of resident to non-residents irrespective of maturity and respective instruments.
<b>Monetary gold</b>	Gold bars owned by monetary authorities and stored as reserve assets. Gold bars sold to other institutions are demonetized and considered as non-monetary gold.
<b>NPISHs</b>	Non-profit institutions serving households
<b>Reverse investment</b>	Purchase of shares direct investor's share by direct investment enterprise
<b>Fellow enterprises</b>	Two or more companies located in different jurisdiction and having common foreign owner's share
<b>UFRD</b>	Uzbekistan's fund for reconstruction and development
<b>IMF</b>	International monetary fund
